COURSE OUTLINE

Semester - III

W.E.F. 2018 – 19

MATHEMATICS-III					
COURSE OUTLINE					
Course Title:	MATHEMATICS-III	Short Title:	M-III	Course Code:	
Course description:					
This course is aimed at introducing the fundamentals of basic Mathematics to undergraduate students. The background expected includes a prior knowledge of Mathematics from first year engineering or diploma and familiarity with various laws, principles and theories of probability and statistics. The goals of the course are to understand the basic principle of Transforms, probability, statistics and its application in Engineering Field.					
	Hours/week	No. of weeks	Total hours	Semester credits	
Lecture	3	14	42	4	
Tutorial	1	14	14		
Prerequisite course(s):					
Mathematics –I , Mathematics –II					
Course objectives:					
<ol style="list-style-type: none"> 1. To familiarize the prospective engineers with techniques in Basic Transforms. 2. To equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines 					
Course outcomes:					
After successful completion of this course the students should be able to					
<ol style="list-style-type: none"> 1. Solve field problems in engineering involving Ordinary differential equations using Laplace Transform. 2. To formulate and solve problems involving random variables 3. To statistical methods for analyzing experimental data. 					
COURSE CONTENT					
Mathematics -III			Semester:	III	
Teaching Scheme:			Examination scheme		
Lectures:	3 hours/week		End semester exam (ESE):		60 marks
Tutorial:	1 hours/week		Duration of ESE:		03 hours
			Internal Sessional Exams (ISE):		40 marks
Unit–I:		No. of Lectures: 08 Hours		Marks: 12	
Laplace Transform: Properties of Laplace Transform, Laplace transform of some important functions. Initial value theorem, final value theorem. Finding inverse Laplace transform by different methods, convolution theorem, Evaluation of integrals, solving Ordinary differential equations. by Laplace transform.					
Unit–II:		No. of Lectures: 08 Hours		Marks: 12	
Fourier Transform:					

Fourier sine and cosine integrals, Fourier sine Transform, Fourier cosine Transform, Inverse Fourier transform. Discrete Fourier Transform (DFT). Properties of DFT.		
Unit–III:	No. of Lectures: 08 Hours	Marks: 12
Z – Transform:		
Introduction, Definition, Region of convergence, Properties of Z-Transform, Inverse Z-Transform, Difference equation using Z-Transform.		
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
Basic Probability:		
Probability spaces, conditional probability, independence; Discrete random variables, Independent random variables ,Addition Law of probability, Multiplication Law of probability, Expectation of Discrete Random Variables, Correlation coefficient. Binomial, Poisson and Normal distributions.		
Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Test of significance:		
Testing of Hypothesis, Null Hypothesis and Alternative Hypothesis. Level of Significance. Test of Significance of large sample, Small sample test for mean, testing for difference between means of two samples.		
Text Books :		
<ol style="list-style-type: none"> 1. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2016. 2. H.K.DASS “Advance Engineering Mathematics” S. Chand publications, 5th revised Edition 3. S. C. Gupta “Fundamentals of Statistics”, Himalaya Publishing House, 6th revised Edition 4. Debashis Datta “Textbook of Engineering Mathematics” New Age International Publication, revised 2nd Edition 		
Reference Books:

Signals & Systems				
COURSE OUTLINE				
Course Title:	Signals & Systems	Short Title:	S&S	Course Code:
Course description:				
<p>Signals play a major role in our life and it can be represented in a number of ways. Signal processing is a method of extracting information from the signal which in turn depends on type of signal and the nature of information it carries.</p> <p>This course describes the various signals with the help of mathematical tools such as Fourier Transform, Laplace Transform and Z-Transform. It also introduces the state space approach of system.</p>				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3
Prerequisite course(s):				
Mathematics - II				
Course objectives:				
<ol style="list-style-type: none"> 1. To introduce the students to the various signals. 2. Study and understanding of representation of signals and systems. 3. To learn and understand different Transforms for Digital Signal Processing 4. Analysis of Discrete Time signals and systems 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Develop the ability for generating proper solution to signal processing problems. 2. Understanding Digital Signal Processing and analysis. 3. Understand the mathematical concepts of signal representation and transformations with their analysis. 4. Understand Digital Signal Processing Applications and implementation of signal processing to various applications 				
COURSE CONTENT				
Signals & Systems		Semester:	III	
Teaching Scheme:		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):	60 marks	
		Duration of ESE:	03 hours	
		Internal Sessional Exams (ISE):	40 marks	
Unit-I:	No. of Lectures: 08 Hours	Marks: 12		
Classifications of Signals and Systems (only Introduction)				
<p>Classifications of Signals-Deterministic and non-deterministic signals, periodic and aperiodic signals, even and odd signals, energy and power signals.</p> <p>Singularity functions-unit impulse function, unit step function, unit ramp function, unit pulse function, representation of signals.</p> <p>Classifications of Systems-Static and dynamic systems, linear and non-linear systems, time</p>				

variant and time invariant systems, stable and unstable systems.		
Simple manipulations of discrete time signals -shifting, folding, time scaling. Representations of systems, Linear differential equations, Impulse response of a system. Analog to digital conversion of signals-sampling of continuous time signals, signal reconstruction.		
Unit-II:	No. of Lectures: 08 Hours	Marks: 12
Fourier Transform		
Introduction - Trigonometric Fourier series, complex or exponential form of Fourier series, Parseval's identity for Fourier series.		
Fourier Transform - energy spectrum for non-periodic function, properties of Fourier Transform.		
Discrete Fourier Transforms (DT) - discrete convolution, properties of convolution, circular convolution (numerical), Discrete -Time Fourier Transform (DTFT),properties of DFT (numerical)		
Unit-III:	No. of Lectures: 08 Hours	Marks: 12
Laplace Transforms		
Definition, Region of Convergence (ROC), LT of some important function and numerical. Initial value theorem , Final value theorem. Convolution integral numerical. Application of LT only in series R-L circuit and series R-C circuit.		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
z- Transforms		
Introduction, definition, Region of Convergence (ROC), properties of the ROC for the z-transform and numerical. Properties of z-transform such as Linearity, Time Reversal, Time Shifting, Scaling, Differentiation, Convolution and numerical based on these properties.		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
State space analysis		
Concept of state (State variable and state model). State model of linear system. Eigen Values of Matrix A. Solution of state equation. Properties of State Transition Matrix and numerical.		
Text Books:		
1. S. Salivahanan, C. Gnanpriya, Digital Signal processing, McGraw Hill, 4 th Edition 2. I.J. Nagrath and M. Gopal , Control system Engineering- New Age 5 th Edition		
Reference Books:		
1. John G. Proakis, Dimitris G. Manolakis, Digital Signal Processing Principles, algorithms and applications, Pearson Prentice Hall, Fourth edition 2. I.J. Nagrath, S.N. Sharan, R.Ranjan,S.Kumar, Signals and Systems, TMH, 2 nd Edition 3. Katsuhiko Ogata, Modern Control Engineering, Pearson, 4 th edition. 4. A. Anand Kumar, Signals and Systems, PHI 5. Rishabh Anand, Signals and Systems, Khanna Book Publishing Co., Delhi 6. Tarun Rawat, Signals and Systems, Oxford University Press 7. B.P. Lathi, Signal Processing and Linear Systems, Oxford University Press		

Analog Electronic Circuits				
COURSE OUTLINE				
Course Title:	Analog Electronic Circuits	Short Title:	AEC	Course Code:
Course description:				
This course provides the students with comprehensive study of basic components and circuits of Analog Electronics. It deals with BJT, FET, OpAmp, DAC and ADC.				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3
Prerequisite course(s):				
Basic knowledge of Electronics				
Course objectives:				
<ol style="list-style-type: none"> 1. To give the brief idea about basics of transistor configurations. 2. To familiarize the students to perform the frequency analysis of any Analog electronics circuit. 3. To empower students to understand the design and working of BJT / FET amplifiers, oscillators and Operational Amplifier. 4. To prepare the students for operational amplifier, DAC, ADC Circuit Design. 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Acquire basic knowledge of physical and electrical conducting properties of transistor. 2. Develop the ability to understand the design and working of BJT / FET amplifiers. 3. Able to design amplifier circuits using BJT s And FET's and observe the amplitude and frequency responses of common amplifier circuits 4. Observe the effect of negative feedback on different parameters of an Amplifier and different types of negative feedback topology. 5. Observe the effect of positive feedback and able to design and working of different Oscillators using BJTS. 6. Develop the skill to build, and troubleshoot Analog circuits. 				
COURSE CONTENT				
Analog Electronic Circuits		Semester:	III	
Teaching Scheme:		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):	60 marks	
		Duration of ESE:	03 hours	
		Internal Sessional Exams (ISE):	40 marks	
Unit-I:	No. of Lectures: 08 Hours	Marks: 12		
Transistor				
BJT &FET voltage divider biasing, Q point & Stability factor analysis, BJT - h parameter analysis for CE,CB, CC, Miller theorem and its dual Cascade configuration- CE-CE, CE-CB, CE-CC, Darlington configuration				
Unit-II:	No. of Lectures: 08 Hours	Marks: 12		
Frequency Response and power amplifiers				

Frequency response of single & cascade stages, High frequency model of CE & short circuit current gain, Class A series fed & transformer coupled amplifier, Class B complementary symmetry configuration, Power relation & efficiency, Harmonic distortion analysis		
Unit–III:	No. of Lectures: 08 Hours	Marks: 12
Feedback amplifiers		
Negative feedback- Classification, characteristics of negative feedback, analysis of all the four topologies-voltage series, current series, voltage shunt, current shunt Positive feedback- Barkhausen Criterion, R-C phase shift & Wein bridge oscillator, Hartley, Colpitt & Clapp oscillator		
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
Operational Amplifier		
Differential Amplifier- Ad, Ac & CMRR, OPAMP Applications-Inverting and Non inverting amplifier, Adder Subtractor, Integrator , Differentiator, Instrumentation amplifier ,log amplifier, antilog amplifier, Schmitt trigger		
Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Filters and Convertors		
OPAMP active filters – Low pass ,high pass ,band pass ,band stop ,Design guidelines, DAC- Weighted resistor,R2R ladder ,ADC-Single slope , Dual slope and Successive approximation Switched capacitors circuit, basic concept and practical configuration		
Text Books:		
1. Millman and Halkais, Integrated Electronics TMH Publication, 2 nd Edition 2. J.V. Wait, L.P. Huelsman & G.A. Korn Introduction to Operational Amplifier- Theory and Applications, Mcgraw Hills, 2 nd Edition 3. R. A. Gaikwad , OpAmp & Linear Integrated Circuits, Pearson Edition, 4 th Edition		
Reference Books:		
1. Louis Nashelsky & Robert Boylestad, Electronics Devices and Circuits Theory, , Pearson Publication, 10 th Edition 2. Dr. R. S. Sedha, Electronics Circuits by, S Chand Publication,4th Edition 3. L.K. Maheshwari, Analog Electronics, Laxmi Publications 4. A.K. Maini, Analog Electronics, Khanna Publishing House 5. I.G. Nagrath, Analog Electronics, PHI		

Discrete Mathematics				
COURSE OUTLINE				
Course Title:	Discrete Mathematics	Short Title:	DM	Course Code:
Course description:				
Basic set theory and symbolic logic. Methods of proofs, including mathematical induction. Relations, functions, and partitions; modular arithmetic. Graph and Trees				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3
Prerequisite course(s):				
Basic Mathematics Concepts				
Course objectives:				
<ol style="list-style-type: none"> 1. Learn the use of set, proof techniques and determine logical possibilities in a given situation. 2. Learn relations, functions among various entities in real world. 3. Learn to apply relations and functions in real life. 4. Learn to formulate problem mathematically using graph theory and trees. 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Express given logic sentence it in terms of predicates, quantifiers, and logical connectives 2. Derive the solution using deductive logic and prove the solution based on logical inference for given problem 3. Classify given a mathematical problem according to its algebraic structure 4. Develop the given problem as graph networks and solve with techniques of graph theory. 				
COURSE CONTENT				
Discrete Mathematics		Semester:	III	
Teaching Scheme:		Examination scheme:		
Lectures:	3 hours/week	End semester exam (ESE):		60 marks
		Duration of ESE:		03 hours
		Internal Sessional Exams (ISE):		40 marks
Unit-I:		No. of Lectures: 08 Hours		Marks: 12
Set, Relation and Function:				
Operations and Laws of Sets, Cartesian Products, Cantor's diagonal argument and The Power Set theorem, Schroeder-Bernstein theorem. Binary Relation, Partial Ordering Relation, Equivalence Relation, Functions, Bijective functions, Inverse and Composite Function				
Unit-II:		No. of Lectures: 08 Hours		Marks: 12
Mathematical Induction, Counting				
The Well-Ordering Principle, Recursive definition, The Division algorithm: Prime Numbers, The Greatest Common Divisor: Euclidean Algorithm, The Fundamental Theorem of Arithmetic. Basic counting techniques-inclusion and exclusion, pigeon-hole principle, permutation and combination. Number system and Inter conversion of number system.				
Unit-III:		No. of Lectures: 08 Hours		Marks: 12

Propositional Logic		
Syntax, Semantics, Validity and Satisfiability, Basic Connectives and Truth Tables, Logical Equivalence: The Laws of Logic, Logical Implication, Rules of Inference, The use of Quantifiers.		
Proof Techniques: Some Terminology, Proof Methods and Strategies, Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency.		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
Algebraic Structures and Morphism		
Algebraic Structures with one Binary Operation, Semi Groups, Monoids, Groups, Algebraic Structures with two Binary Operation, Rings, Integral Domain and Fields. Boolean Algebra and Boolean Ring, Identities of Boolean Algebra, Duality, Representation of Boolean Function, Disjunctive and Conjunctive Normal Form		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
Graphs and Trees		
Graphs and their properties, Degree, Connectivity, Path, Cycle, Sub Graph, Isomorphism, Eulerian and Hamiltonian Walks, Graph Coloring, Coloring maps and Planar Graphs, Dijkstra's shortest path Algorithm, Perfect Graph, definition properties and Example, rooted trees, trees and sorting, weighted trees and prefix codes, Kruskal's and Prim's algorithm for minimum spanning tree		
Text Books:		
<ol style="list-style-type: none"> 1. Kenneth H. Rosen, Discrete Mathematics and its Applications, Tata McGraw – Hill, 7th Edition 2. Susanna S. Epp, Discrete Mathematics with Applications, Wadsworth Publishing Co. Inc., 4th edition 3. C L Liu and D P Mohapatra, Elements of Discrete Mathematics A Computer Oriented Approach, Tata McGraw – Hill, 3rd Edition,

Biggs, Discrete Mathematics, Oxford University Press, 2nd Edition 3. Seymour Lipschutz, Marc Lipson Discrete Mathematics Schaum's Outlines Series, Tata McGraw – Hill ,2nd Edition. 4. Chakraborty & Sarkar, Discrete Mathematics and Its Applications, Oxford 5. S.B. Singh, Discrete Structures, Khanna Book Publishing, Delhi 6. T. Veerarajan, Discrete Mathematics, Tata McGraw-Hill 		

Organizational Behavior				
COURSE OUTLINE				
Course Title:	Organizational Behavior	Short Title:	OB	Course Code:
Course description:				
This course includes the behavior of people in the work environment. Students develop a basic understanding of individual behavior and explore issues of personality, attitude, motivation, communication, leadership, job satisfaction, group dynamics and work stress.				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3
Prerequisite course(s):				
Basic knowledge of the organization and human behavior.				
Course objectives:				
<ol style="list-style-type: none"> 1. To study Human behavior at work 2. To obtain knowledge of Individual and Group Perspective 3. To get in depth knowledge about Motivation and Leadership theories 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Analyze the behavior of individuals and groups in organizations. 2. Understand the basic knowledge of individual and group perspective. 3. Understand theories of motivation and leadership. 4. To understand how to deal with work stress. 				
COURSE CONTENT				
Organizational Behavior		Semester:	III	
Teaching Scheme:		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):	60 marks	
		Duration of ESE:	03 hours	
		Internal Sessional Exams (ISE):	40 marks	
Unit-I:		No. of Lectures: 08 Hours	Marks: 12	
Introduction to Organization Behavior				
<ul style="list-style-type: none"> • Meaning and Definition of Organization Behavior (O.B) • Key Elements of Organization Behavior • Nature and Scope of Organization Behavior • Importance of Organization Behavior • Disciplines Contributing to O.B • Emerging Challenges and Opportunities for O.B. 				
Unit-II:		No. of Lectures: 08 Hours	Marks: 12	
Individual Perspective / Foundation of Individual Behavior				
(a) Personality:				
<ul style="list-style-type: none"> • Meaning and Definition of Personality • Factors/Key Determinants of Personality 				

<ul style="list-style-type: none"> • Personality Traits <p>(b) Attitudes:</p> <ul style="list-style-type: none"> • Meaning & Nature of Attitude • Types of Job Attitude • Components of Attitude • Functions of Attitude • Ways to change Attitude <p>(c) Job Satisfaction:</p> <ul style="list-style-type: none"> • Meaning and Definition of Job Satisfaction • Factors affecting Job Satisfaction • Ways of measuring Job Satisfaction • Impact of Job Satisfaction on Work Performance 		
Unit–III:	No. of Lectures: 08 Hours	Marks: 12
Group Dynamics:		
<ul style="list-style-type: none"> • Meaning of Group, Group Dynamics • Why do people join groups • Types of Groups • The Five Stage Model of Group Development • Group Properties: Group Norms, Group Size, Group Cohesiveness, • Concept: Group Think, Group Shift 		
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
Motivation and Leadership:		
<p>Motivation:</p> <ul style="list-style-type: none"> • Meaning and Definition of Motivation • Types of Motivation: Financial and Non-Financial • Theories of Motivation <ul style="list-style-type: none"> a) Maslow’s Hierarchy of needs Theory b) Theory X and Theory Y c) Goal Setting Theory <p>Leadership:</p> <ul style="list-style-type: none"> • Meaning & Importance of Leadership • Styles of Leadership • Theories of Leadership <ul style="list-style-type: none"> a) Likert’s system of 4 b) Path Goal Theory c) Charismatic Leadership Theory 		
Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Work Stress:		
<ul style="list-style-type: none"> • Meaning, Nature of Stress • Factors causing Stress • Consequences of Stress • Management of Stress 		
Text Books:		
1.Suja R. Nair , Organizational Behavior-Text & Cases, Himalaya Publishing House, 2009 Reprint		

2.K.Aswathappa, Organizational Behavior-Text, Cases & Games, , Himalaya Publishing House, 12th Revised Edition

Reference Books:

1. Margie Parikh, Rajen Gupta, Organizational Behaviour-, Tata McGraw Hill Publishing, 2010 Edition

Analog Electronic Circuits Lab					
LAB COURSE OUTLINE					
Course Title:	Analog Electronic Circuits Lab	Short Title:	AECL	Course Code:	
Course description:					
This course provides the students with comprehensive study of basic components and circuits of Analog Electronics. It deals with BJT, FET, OpAmp, DAC and ADC.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	2	14	28	1	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Basic knowledge of Electronics					
Course objectives:					
<ol style="list-style-type: none"> 1. To give the brief idea about basics of transistor configurations. 2. To familiarize the students to perform the frequency analysis of any Analog electronics circuit. 3. To empower students to understand the design and working of BJT / FET amplifiers, oscillators and Operational Amplifier. 4. To prepare the students for operational amplifier, DAC, ADC Circuit Design. 					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Acquire basic knowledge of physical and electrical conducting properties of transistor. 2. Develop the ability to understand the design and working of BJT / FET amplifiers. 3. Able to design amplifier circuits using BJTs and FET's and observe the amplitude and frequency responses of common amplifier circuits 4. Observe the effect of negative feedback on different parameters of an Amplifier and different types of negative feedback topologies. 5. Observe the effect of positive feedback and able to design and working of different Oscillators using BJTs. 6. Develop the skill to build, and troubleshoot Analog circuits. 					
LAB COURSE CONTENT					
Analog Electronic Circuits Lab			Semester:	III	
Teaching Scheme:			Examination scheme		
Practical:	2 hours/week		End semester exam (ESE):	25 marks	
			Internal Continuous Assessment (ICA):	25 marks	
Concerned faculty member should suitably frame FIVE laboratory assignments from the following list.					
<ol style="list-style-type: none"> 1. BJT/FET Q point & load line. <p style="text-align: center;">OR</p>					

<p>Frequency Response of CE-CE cascade</p> <p>2. Effect of Emitter Bypass Capacitor (CE Configuration). OR Cross over distribution & its elimination.</p> <p>3. Effect of partial feedback for voltage shunt configuration. OR Output and Frequency of RC Phase Shift Oscillator.</p> <p>4. OP-AMP as an Integrator & Differentiator. OR OP-AMP Instrumentation Amplifier.</p> <p>5. OP-AMP Low Pass Filter. OR OP-AMP High Pass Filter</p>
<p>Text Books:</p> <p>1. Millman and Halkais, Integrated Electronics, TMH Publication, 2nd Edition 2. J.V. Wait, L P. Huelsman & G.A. Korn Introduction to Operational Amplifier- Theory and Applications,, Mcgraw Hill, 2nd Edition 3. R. A. Gaikwad, OpAmp and Liner Integrated Circuits, Pearson, 4th Edition</p>
<p>Reference Books:</p> <p>1. Louis Nashelsky & Robert Boylestad, Electronics Devices and Cercuits Theory, , Pearson Publication, 10th Edition 2. Dr. R. S. Sedha, Electronics Circuits by, S Chand Publication,4th Edition 3. L.K. Maheshwari, Analog Electronics, Laxmi Publications 4. A.K. Maini, Analog Electronics, Khanna Publishing House 5. I.G. Nagrath, Analog Electronics, PHI</p>
<p>Guide lines for ICA:</p> <p>Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.</p>
<p>Guidelines for ESE:</p> <p>ESE will be based on the laboratory assignments submitted by the students in the form of journal. Evaluation will be based on the understanding and execution.</p>

Discrete Mathematics Lab					
LAB COURSE OUTLINE					
Course Title:	Discrete Mathematics Lab	Short Title:	DML	Course Code:	
Course description:					
This course provides students with a comprehensive study of Discrete Mathematics concepts. Introduction to program design and problem solving using the C/ C++ programming language. Programming topics include set operations such as: union, intersection, difference, power set, graph theory: Dijkstra Algorithm and tree concepts: Prims algorithm, Kruskal's algorithm.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	2	14	28	1	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Basic Math concept, Basic C concepts					
Course objectives:					
1. Learn the fundamentals, structure of Discrete Mathematics. 2. Write programs in C/C++ Language to implement Discrete Mathematics concepts.					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
1. Understand the fundamentals of Discrete Mathematics. 2. Design solution to problems in Discrete Mathematics 3. Implement Discrete Mathematics basic concepts					
LAB COURSE CONTENT					
Discrete Mathematics (Lab)			Semester:	III	
Teaching Scheme:			Examination scheme		
Practical:	2 hours/week		End semester exam (ESE):		25 marks
			Internal Continuous Assessment (ICA):		25 marks
Concerned faculty member should suitably frame at least FIVE Laboratory assignments from Group - A and FIVE Laboratory assignments from Group – B, using C/C++ programming language from the following list.					
Group: A					
1. A program for logical operations using bitwise operators. 2. A program for set operations: Union, Intersection, Difference, Symmetric difference. 3. A program for generation of Power set of a given set. 4. A program for inter conversion of number system.					

5. A program for producing permutation set for given input set.
6. A program for producing combination set for given input set.

Group: B

1. A Program for Greatest Common Divisor using Euclidean Algorithm.
2. A Program for Binary search.
3. A Program for Shortest Path algorithm using Dijkstra's.
4. A program for implementation of Kruskal's algorithm.
5. A program for implementation of Prim's algorithm.
6. A Program to Construct a Tree & Perform Insertion, Deletion, Display

Note: Use of Open Source Software/Tool/Technology is recommended for laboratory assignments of concern subject.

Guide lines for ICA:

Students must submit ICA in the form of journal. Each assignment should be well documented.

Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.

Guidelines for ESE:

ESE will be based on the Laboratory assignments submitted by the students in the form of journal. In the ESE(PR), the students may be asked to perform the practical assignment with minor modification.

Evaluation will be based on the paper work of algorithm, understanding of the logic and the syntax, quality of the program, execution of the program, type of input and output for the program.

Object Oriented Programming Lab					
LAB COURSE OUTLINE					
Course Title:	Object Oriented Programming Lab	Short Title:	OOPL	Course Code:	
Course description:					
This course provides students with a comprehensive study of the C++ programming Language. C++ programming provides students with the means of writing efficient, maintainable, and portable code..					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
Theory	1	14	14	2	
Practical	2	14	28		
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Fundamental knowledge of Computers and C programming					
Course objectives:					
<ol style="list-style-type: none"> 1. To understand the Class and Object concept to solve real world Problem. 2. To write well-drafted programs in C++ using object-oriented techniques. 3. To understand the Concept of inheritance to solve real world problem. 4. To employ good programming team, standards and Practices, during program development. 					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. To Create Class & Object 2. To Apply concept of Polymorphism 3. To Apply data sharing using friend function. 4. To Apply concept of inheritance for different problem solving 5. To Create and Demonstrate operator Overloading 6. To Implement Class & Function Template. 					
LAB COURSE CONTENT					
Object Oriented Programming Lab			Semester:	III	
Teaching Scheme:			Examination scheme		
Practical:	2 hours/week		End semester exam (ESE):		25 marks
			Internal Continuous Assessment (ICA):		25 marks
LAB COURSE CONTENT					
Introduction to Object Oriented Programming					
a. Introduction to procedural, modular and object-oriented programming techniques.					

- b. Limitations of procedural programming.
- c. Need of object-oriented programming. Advantages, disadvantages and applications of OOP.
- d. Class, objects, abstraction, encapsulation, data hiding, inheritance, polymorphism and message passing.
- e. The basics of C++
- f. Expressions

Classes and Objects, Function and Operator Overloading

- a. Class and objects
- b. Constructors and destructors
- c. Functions in C++
- d. Function Overloading
- e. Operator overloading

Pointers and Arrays

- a. Introduction, pointer declaration, voids pointers.
- b. Pointers to class objects, this pointer.
- c. Pointers to members, accessing private members with pointers.
- d. Characteristics of arrays, initialization of arrays.
- e. Arrays within a class, arrays of objects.
- f. Dynamic memory allocation using new and delete operators.
- g. One dimensional and two dimensional arrays using pointers.

Inheritance, Virtual functions and Polymorphism

- a. Introduction, base and derived classes. Inheritance types, access modifiers.
- b. Single inheritance, multiple and multilevel inheritance, hybrid, hierarchical, multipath Inheritance and virtual base classes.
- c. Overriding base class members. Constructors and inheritance, calling base class constructor.
- d. Static and dynamic binding. Pointers to base and derived classes.
- e. Virtual functions, rules for virtual functions, working of virtual functions, pure virtual functions.
- f. Virtual base classes

Files and Streams, Managing Console I/O Operations and Templates

- a. Concept of a file, file stream operations.
- b. Opening a file using constructor and open function, closing a file, detecting end-of-file, file modes, file pointers.
- c. Introduction to C++ streams, stream classes, unformatted and formatted I/O.
- d. ios class functions and flags, manipulators.
- e. Introduction to function template and class template.

Concern faculty member should suitably frame at least SIX Lab assignments from group A and FOUR from group B using C++ programming language from the following list.

Group A

1. Write a program for a simple class and object.
Performing simple arithmetic operations using C++ class and object like,
 - a. Addition,
 - b. Subtraction,
 - c. Multiplication,

d. Division.

2. Write a program for parameterized constructor. Demonstrate the use parameterized constructor by passing different types of parameters to the constructor.
3. Write a program for overloading constructors.
Demonstrate the concept of overloading constructor functions using class and object.
4. Write a program to find the area of rectangle, triangle and sphere using function overloading.
To calculate the area of rectangle, triangle and sphere using function overloading and class and object.
5. Write a program to overload unary operator using member function.
6. Write a program to overload binary operator using member function.
7. Write a program for arrays of pointers to objects.
Declaring an array of pointers to objects using suitable example.
8. Write a program using single inheritance, multiple inheritance and hierarchical inheritance
9. Write a program using multilevel inheritance and hybrid inheritance.
10. Write a program for addition of two matrices using friend function.
11. Write a program to read and write class objects from files.
Writing/reading class object to/from file.
12. Write a program to format output using ios class functions and flags.
13. Write a program to format output using manipulators.
14. Write a program using class template.
15. Write a program for overloading of template functions.

Group B

1. Write a program for the copy constructor.
2. Write a program to overload unary operator using friend function.
3. Write a program to overload binary + operator using member function for concatenation of two strings.
4. Write a program for matrix multiplication using new and delete dynamic memory allocation operators.
5. Write a program to convert class type data to basic type data.
6. Write a program for run time polymorphism using virtual functions.
7. Write a program for bubble sort using template functions.

Note: Use of Open Source Software/Tool/Technology is recommended for laboratory assignments of concern subject.

COURSE OUTLINE

Semester - IV

W.E.F. 2018 – 19

Biology				
COURSE OUTLINE				
Course Title:	Biology	Short Title:	BIO	Course Code:
Course description:				
This course is introduced for learning the basic fundamentals of Life sciences (zoology & Botany) to undergraduate students. The goals of the course are to understand the basic principles of Biology and its applications in the field of Engineering.				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
Lecture	3	14	42	4
Tutorial	1	14	14	
Prerequisite course(s):				
Course objectives:				
<ol style="list-style-type: none"> 1. Students will understand the structures and characteristics or functions of basic components of prokaryotic and eukaryotic cells, especially macro-molecules, membranes, and organelles. 2. Students will learn the basic principles of inheritance at the molecular, cellular and Organism levels. 3. Students will test and deepen their mastery of genetics by applying this knowledge in a variety of problem-solving situations. 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Use current techniques and analysis methods in molecular biology and genetics. 2. Understand the current concepts in Cell Biology, Stem Cell Biology and Development. 3. Know the structure/function of the basic components of prokaryotic and eukaryotic cells including macro-molecules and organelles. 4. Demonstrate proficiency with at least one instrument commonly used in biological research (microscope, etc). 				
COURSE CONTENT				
Biology		Semester:	IV	
Teaching Scheme:		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):	60 marks	
Tutorial	1 hours/week	Duration of ESE:	03 hours	
		Internal Sessional Exams (ISE):	40 marks	
Unit-I:		No. of Lectures: 08 Hours		Marks: 12
Diversity of Organism and Cell Biology				
Introduction: Living systems, Bio-mimicry, Metabolism, Taxonomy, Concept of species, Structural organization of life, Concepts of modern cell, history of cell, Cell theory, Structure of cell:- Cell shape, size and cell number, Types of cells:- Prokaryotic cells and Eukaryotic cells, Chemistry of cells.				

Cell Division: Cell cycle, mitosis, meiosis, mitotic cell division, cell cycle check points, meiotic cell division, embryonic cell division, cell death.		
Unit–II:	No. of Lectures: 08 Hours	Marks: 12
Plant and Animal Kingdom		
Plant Kingdom: Introduction to plants, Salient features of major plant groups: Bryophyta, Pteridophyta, Gymnospermae, Angiospermae, Plant Growth & Development: Introduction, Seed Dormancy, Seed Germination, Phases of growth, Plant growth hormones. Animal Kingdom: Animal Classification, Salient features of non-chordates upto phylum level: Phylum porifera, phylum cindaria, phylum ctenophore, phylum platyhelminthes.		
Unit–III:	No. of Lectures: 08 Hours	Marks: 12
Plant Cell and Animal cell culture and Applications		
Plant Cell Culture: Brief introduction to cell culture with respect to the properties of plant cells, Media requirements, Typical media used, Classification of tissue culture, callus culture, cell suspension culture, Application of callus culture and cell suspension culture, Plant cell cultivation Bioreactors Animal Cell Culture: Brief introduction to animal cell culture, Culture medium: Natural and Artificial media, introduction to balanced salt solutions and simple growth medium, Brief discussion on the chemical, physical and metabolic functions of different constituents of culture medium, Animal Bioreactors.		
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
Microbial Culture and Applications:		
Introduction, Microbial Culture Techniques, growth curve, Pure culture techniques – microbial culture media, isolation, identification and maintenance of cultures, incidences of microorganisms in soil, water, air, food and sewage, food spoilage organisms, Applications of Microbial Culture Technology.		
Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Biotechnology and its Applications:		
Definitions, scope of Biotechnology, Recombinant DNA Technology: Making Recombinant DNA, Tools in Genetic Engineering, Polymerase Chain reaction (PCR). Applications of Biotechnology: Bioinformatics, Biomechanics, Biotechnology of waste treatment, Biosensors, Forensic science, Food Biotechnology, Fermentation Technology.		
Text Books:		
<ol style="list-style-type: none"> 1. B.D. Singh “ Genetics” Kalyani Publications 2. C.B. Pawar“Cell Biology” Himalaya Publications, Third Edition. 3. C.B. Pawar“Cell and Molecular Biology” Himalaya Publications. 4. Text book of Zoology by V.K. Agrawal, S. Chand Publication. 5. Text book of Botany by Dr. B.P. Pandey S. Chand Publication. 6. Text book of Biotechnology by R.C. Dubey, S. Chand Publications 		
Reference Books:		
<ol style="list-style-type: none"> 1. P. K Gupta, Introduction to Biotechnology, Rastogi Publications. 2. B.D.Singh, Biotechnology: Expanding Horizons, Kalyani Publishers, New Delhi, Second 		

Revised Edition, 2008.

3. S.S.Purohit, Biotechnology: Fundamentals and Applications, Agrobios (India), 4th Edition, 2005.
4. Andreas D. Boxevanis, Bioinformatics, Wiley International
5. David W. Mount, Bioinformatics: Sequence and Genome analysis, Cold Spring Harbour.
6. Bruce E Rittmann, Rurry L.Mc carty, Environmental Biotechnology:Principles and Applications, Mcgraw Hill international.

8. Bhojwani, S.S.and Rajdan, Plant Tissue Culture: Theory and Practice, Revised Edition, Elsevier
9. Freshney, Culture of Animal Cells, 5th Edition, Wiley-Liss, 2005
10. M.J. Pelczar, Jr. E.C.S. Chan and N.R. Krieg, Microbiology 5th Ed., TMH Book Company.
11. Biology for Engineers (ISBN: 9781121439931), TMH

Digital Electronics				
COURSE OUTLINE				
Course Title:	Digital Electronics	Short Title:	DE	Course Code:
Course description:				
This course is designed to give a brief understanding of the principles of Digital Techniques and designing of several applications. This course covers different types of codes, Boolean laws, SOP & POS form, K-map optimization technique, arithmetic circuits, code converters, Multiplexer, De-multiplexer and their applications, different types of flip-flops and their applications, sequential circuits such as ripple counter, synchronous counter, Mod-n counter, shift register and its applications.				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3
Prerequisite course(s):				
Physics				
Course objectives:				
<ol style="list-style-type: none"> 1. To acquire the basic knowledge of digital logic levels and application of 2. Knowledge to understand digital electronics circuits. 3. To prepare students to perform the analysis and design of various digital electronics circuits 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Understand working of logic gate 2. Understand and use of K-Map for simplification 3. Design and implementation of combinational Logic circuits 4. Design and implementation of sequential Logic circuits 				
COURSE CONTENT				
Digital Electronics		Semester:	IV	
Teaching Scheme:		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):	60 marks	
		Duration of ESE:	03 hours	
		Internal Sessional Exams (ISE):	40 marks	
Unit-I:	No. of Lectures: 08 Hours	Marks: 12		
Representation of signed numbers: fixed and floating point numbers. Binary Coded Decimal Code, Gray Code, Error detection and Correction Code –Hamming Code. Boolean Algebra, DeMorgan's Theorem, Simplification of logical Expression using Boolean Algebra and DeMorgan's Theorem.				
Unit-II:	No. of Lectures: 08 Hours	Marks: 12		
Standard representation of logic functions- SOP and POS forms. Min term and Max term. Don't care conditions. Simplification of logic functions-using Karnaugh Map (K- Map) for 2,3 and 4				

variables. Quine-McCluskey tabular method -four variables.		
Unit–III:		
No. of Lectures: 08 Hours	Marks: 12	
Introduction to combinational Logic circuits. Adders Subtractors-,Half and Full adder and subtractor truth table and logic circuit.BCD arithmetic. Popular MSI Chips-Digital Comparator (2 and 4 Bits). Code Converters-Gray to Binary and vice versa. Multiplexer -2:1, 4:1 and 8:1.Demultiplexer-1:2,1:4 and 1:8.Decoders-1:2,2:4 and 3:8.Encoders 8:3 and Priority Encoder.		
Unit–IV:		
No. of Lectures: 08 Hours	Marks: 12	
Introduction to sequential Logic circuits. A 1-Bit Memory cell. Bi-stable latch circuit properties. The clocked SR flip flop, J-K,T and D types flip flops. Preset and clear inputs. Registers-SISO, SIPO, PISO AND PIPO 4 –BIT REGISTER. Shift Register-Right shift, left shift and Bidirectional Register. Application of shift Register- Ring and Twisted Ring Counter.		
Unit–V:		
No. of Lectures: 08 Hours	Marks: 12	
Counters- Modulus and recycling of counter .Types of counters- Asynchronous and Synchronous .Up, Down and Up-Down Counters Asynchronous Counter-2,3 and 4 Bit Up ,down and Up-Down Counters. Synchronous Counter-2, 3 and 4 Bit Up, down and Up-Down Counters.		
Text Books:		
1. R P Jain, Modern Digital Electronics, MCGraw Hill, 4 th Edition		
2. A Kumar, Fundamentals’ of Digital Circuits” by, Prentice Hall India, 3 rd Edition

Data Structure & Algorithms					
COURSE OUTLINE					
Course Title:	Data Structure & Algorithms	Short Title:	DSA	Course Code:	
Course description:					
The objective of this course is to introduce the students to the fundamentals of Data Structure with concepts of the C/C++/JAVA programming language and enable them to apply these concepts for solving real world problems					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	3	14	42	4	
Prerequisite course(s):					
Discrete Mathematics					
Course objectives:					
<ol style="list-style-type: none"> 1. To impart the basic concepts of data structures and algorithms. 2. To understand the basic concepts of searching and hashing 3. To understand the basic concepts of operations in data structures 4. To understand the time and space required for a given algorithm, 					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Apply suitable data structure for a given problem. 2. To design and implement basic data structures and to determine time and space complexity. 3. Apply suitable searching algorithm for a given problem. 4. Perform operations like insert, delete, traverse, search etc. in a given data structure. 					
COURSE CONTENT					
Data Structure & Algorithms		Semester:		IV	
Teaching Scheme:		Examination scheme:			
Lectures:	3 hours/week	End semester exam (ESE):		60 marks	
		Duration of ESE:		03 hours	
		Internal Sessional Exams (ISE):		40 marks	
Unit-I:		No. of Lectures: 08 Hours			Marks: 12
Introduction to Data Structure					
Basic Terminology: Data, Data Item, Data type, Data Structure Data Structures: Classification, Operations Linear Arrays: Traversing, Insertion and Deletion Pointers and Structures. Static and Dynamic Memory Management					
Unit-II:		No. of Lectures: 08 Hours			Marks: 12
Stacks and Queues					
Introduction to Stacks and Queue Stacks: Representation of Stack using Array Applications of stack in Arithmetic expressions, recursion and Tower of Hanoi					

Queue: Representation of Queue using Array Circular Queue and its implementation		
Unit–III:	No. of Lectures: 08 Hours	Marks: 12
Linked List		
Concept of linked organization Representation of Linked List in Memory Singly, doubly and circular Linked List Operations on singly and Doubly Linked List such as creation, traversing, searching, insertion, deletion. Representation of Stack and Queue using Linked List		
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12
Trees		
Basic terminology of Trees Binary trees and its representation in memory Binary Search Trees: Searching, Inserting, Deletion and Traversals using Stacks. Balanced Binary Trees: AVL Search Trees and Rotations Heap and Heap sort		
Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Algorithms and Searching		
Complexity of Algorithms: Asymptotic Notations Linear Search Algorithm with time complexity Binary Search Algorithm with time complexity Hashing: Hash table, hashing functions, Collision Resolution Techniques		
Text Books:		
1. Seymour Lipschutz, “Data Structures”, Schaums Outlines, Tata McGraw Hill, 1 st Edition. 2. Ellis Horowitz and Sartaj Sahani, “Fundamentals of Data Structures”, Galgotia Publication, 1 st Edition.		
Reference Books:

Computer Organization and Architecture				
COURSE OUTLINE				
Course Title:	Computer Organization and Architecture	Short Title:	COA	Course Code:
Course description:				
The aim of this course is to introduce the students to the fundamentals of microprocessor with its internal architecture and programming model, basic operational concept within a computer, main memory & cache memory concept and various arithmetic operations on data.				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3
Prerequisite course(s):				
Fundamental Knowledge of Digital Electronics and Number System.				
Course objectives:				
<ol style="list-style-type: none"> 1. How computer system works and basic principle (Architecture level working of computer system). 2. Instruction Set Architecture and Instruction Execution 3. Various types of the memory. 4. To provide the knowledge on assembly language programming. 5. To provide the basic knowledge of control unit design approaches. 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Draw the functional block diagram of a single bus architecture of a computer and describe the instruction execution cycle. 2. Write assembly language programs in 8086 for multiplication and division. 3. Write assembly language programs in 8086 for macros and procedures. 4. Explain and solve arithmetic operations like multiplication using Booth's algorithm and using Bit pairing method. 5. Explain the memory hierarchy with various mapping functions in cache memory organization. 				
COURSE CONTENT				
Computer Organization and Architecture		Semester:	IV	
Teaching Scheme		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):		60 marks
		Duration of ESE:		03 hours
		Internal Sessional Exams (ISE):		40 marks
Unit-I:	No. of Lectures: 08 Hours	Marks: 12		
Functional blocks of a computer: CPU, memory, input-output subsystems, control unit Instruction Set Architecture of a CPU (8086/ 8088) :- 8086 Internal Architecture 8086 Programming Model 8086 Register Organization				

8086 Memory Segmentation 8086 Addressing modes Difference between 8086 and 8088		
Unit-II:	No. of Lectures: 08 Hours	Marks: 12
8086 Instruction Set Macro and Procedure 8086 Assembler Directives (Basic Directives) DOS/BIOS Interrupts 8086 Memory Banking		
Unit-III:	No. of Lectures: 08 Hours	Marks: 12
Basic operational concepts – Connection between processor and main memory Instruction formats - zero, one, two, three and One & half address instruction formats Basic Processing Unit:- Some fundamental concepts, Instruction Execution, Hardwired and Micro-programmed Control Unit. I/O device Interface – USB RISC and CISC		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
Important characteristics of memory system Memory Organization: Memory interleaving, Hierarchical memory organization Cache memory, cache size vs. block size, mapping functions, Concepts of - replacement algorithms and write policies. Introduction to – SRAM, DRAM, ROM,PROM, EPROM, Flash Memory		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
Number representation: Signed & magnitude, 1s & 2s Compliment. Integer addition & subtraction, Overflow Multiplication of numbers: Booth’s algorithm, Bit pairing of multipliers Division : Restoring and non-restoring Division Algorithms Floating Point system: Normalization, Representation in IEEE Single & Double precision formats.		
Text Books:

Finance & Accounting				
COURSE OUTLINE				
Course Title:	Finance & Accounting	Short Title:	FA	Course Code:
Course description:				
The Accounting and Finance program is known for its excellent reputation for quality in the marketplace. As a student in Accounting and Finance, you'll develop excellent technical knowledge of financial accounting & financial management.				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	3	14	42	3
Prerequisite course(s):				
XI and XII mathematics				
Course objectives:				
<ol style="list-style-type: none"> 1. To provide basic knowledge Business Accounting and Costing. 2. To study accounting concepts, conventions & standard. 3. The study fundamental concepts of Financial Management 4. To gain basic knowledge about Finance for planning & control. 				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Be a lifelong learner who stays current in his/her field so as to perform accounting functions according to the Financial Accounting Standards Board and other governing agencies. 2. Be a conscientious professional who practices within the legal and ethical parameters of accounting. 3. Be an effective communicator who is able to listen and respond appropriately while respecting the differences within and between groups in the community. 4. Be a paraprofessional accountant who will have a broad array of skills and knowledge to use effectively in the 21st century. 				
COURSE CONTENT				
Finance & Accounting		Semester:	IV	
Teaching Scheme:		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):	60 marks	
		Duration of ESE:	03 hours	
		Internal Sessional Exams (ISE):	40 marks	
Unit-I:	No. of Lectures: 08 Hours	Marks: 12		
Theoretical Framework				
Meaning and Scope of Accounting Accounting Concepts, Principles and Conventions Accounting Standards –Concepts, Objectives, Benefits Elementary study of AS- 1, 2, 3, 6, 9, 10 Users of Financial Accounting Information				

Unit-II:	No. of Lectures: 08 Hours	Marks: 12
Fundamentals of Double Entry Book Keeping System		
Study of Double Entry Book Keeping System Advantages of double Entry Book Keeping System Comparison of Double Entry Book Keeping System with Single Accounting System Types of Accounts- Personal – Impersonal: Real and Nominal 2.5. Rules for Passing Journal Entries for Different Types of Accounts		
Unit-III:	No. of Lectures: 08 Hours	Marks: 12
Accounting Process		
Journal – Meaning Importance and Utility of Journal Specimen of Journal - Recording of Journal Entries Ledger –Meaning, Need of Ledger Specimen of Ledger -Ledger Posting -Balancing Trial Balance -Meaning and Utility Specimen of Trial Balance – Preparation of Trial Balance Final Accounts for Sole Proprietors Preparation of Trading, Profit And Loss Account and Balance Sheet		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
Scope and Objectives of Financial Management		
Approaches to Financial Management: Traditional View-Modern View- Investment Decisions-Dividend Decisions- Liquidity and Profitability Comparison with Accounting and Economics Financial Management’s Importance in Business: Significance of Financial Controller Finance Manager as a Facilitator- Organization Chart of Finance Function- Reason for Centralizing Finance Function Financial Objectives of Business Firm: Profit Maximization Wealth Maximization Value Maximization Other Maximization Objectives		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
Raising Finance		
Short term Financing Introduction & Characteristics Sources of Short term Finance Long Term Financing Need for long term financing Sources of Long Term Finance Risk analysis in Capital Budgeting & Sensitivity analysis Primary & Secondary Markets Meaning, Importance & Role Market intermediaries: brokers, dealers, investment bankers Bid, Ask or Offer, bid-ask spread, Bull and bear, blue chips, day trading, stop loss,

Digital Electronics Lab				
LAB COURSE OUTLINE				
Course Title:	Digital Electronics Lab	Short Title:	DEL	Course Code:
Course description:				
This course is designed to give a brief understanding of the principles of Digital Techniques and designing of several applications. This course covers different types of codes, Boolean laws, SOP & POS form, K-map optimization technique, arithmetic circuits, code converters, Multiplexer, De-multiplexer and their applications, different types of flip-flops and their applications, sequential circuits such as ripple counter, synchronous counter, Mod-n counter, shift register and its applications.				
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits
	2	14	28	1
End Semester Exam (ESE) Pattern:				
Prerequisite course(s):				
Physics				
Course objectives:				
<ol style="list-style-type: none"> 1. To acquire the basic knowledge of digital logic levels and application of 2. Knowledge to understand digital electronics circuits. 3. To prepare students to perform the analysis and design of various digital electronics circuits 				
Course outcomes:				
Upon successful completion of lab Course, student will be able to:				
<ol style="list-style-type: none"> 1. Understand working of logic gate 2. Understand and use of K-Map for simplification 3. Design and implementation of combinational Logic circuits 4. Design and implementation of sequential Logic circuits 				
LAB COURSE CONTENT				
Digital Electronics Lab		Semester:	IV	
Teaching Scheme:		Examination scheme		
Practical:	2 hours/week			
<p>Concern faculty member should suitably frame at least FIVE laboratory assignments using any logic simulators like Atanua, Cedar logic etc. from the following list.</p> <ol style="list-style-type: none"> 1. Verify the truth tables of logic gates OR, AND, NOT, NOR, NAND 2. Design of 4 bit Gray to binary Code Converter. 3. Realization of adders and subtractor using IC 7486 and 7404. 4. Realization of 2:4 decoder using basic gates. 5. Realization of 8:1 Mux using basic gates. 6. Verify the truth table of J-K, T, and D Flip-flops using ICs. 7. Verify 4-bit register using IC 7495 				

8. Verify Decade counter using IC 7490
Note: Use of Open Source Software/Tool/Technology is recommended for laboratory assignments of concern subject.
Text Books:
1. R P Jain, "Modern Digital Electronics " , MCGraw Hill, 4 th Edition
2. A Kumar, "Fundamentals of Digital Circuits" by, Prentice Hall India, 3 rd Edition
Reference Books:
1. Thomas L Floyd, " Digital Fundamentals", Pearson Prentice Hall, 8 th Edition
2. Jr. Charles H. Roth , "Fundamentals of Logic Design", Thomson Brooks, 5 th Edition
3. John F. Wakenly, Digital Design, Principles and Practics, Pearson Education , 4 th Edition
Anand Kumar, Digital Electronics, PHI
4. R.Anand, Digital Electronics Khanna Publishing House
Guide lines for ICA:
Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.

Data Structure & Algorithms Lab					
LAB COURSE OUTLINE					
Course Title:	Data Structure & Algorithms Lab	Short Title:	DSAL	Course Code:	
Course description:					
This laboratory provides students with a comprehensive study of the C/C++/JAVA programming language in data structures. Classroom lectures stress the strengths of C/C++/JAVA which provide students with the means of writing efficient codes for different data types and data structures.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	2	12	24	1	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Discrete Mathematics					
Course objectives:					
<ol style="list-style-type: none"> 1. To impart the basic concepts of data structures and algorithms. 2. To understand the basic concepts of searching and hashing 3. To understand the basic concepts of operations in data structures 4. To understand the time and space required for a given algorithm, 					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Apply suitable data structure for a given problem. 2. To design and implement basic data structures and to determine time and space complexity. 3. Apply suitable searching algorithm for a given problem. 4. Perform operations like insert, delete, traverse, search etc. in a given data structure. 					
LAB COURSE CONTENT					
Data Structure & Algorithms			Semester:	IV	
Teaching Scheme:			Examination scheme		
Practical:	2 hours/week		End semester exam (ESE):		25 marks
			Internal Continuous Assessment (ICA):		25 marks
<p>Concern faculty member should suitably frame at least FOUR laboratory assignments from the Group A and FOUR experiments from the Group B using C/C++/JAVA from the following list.</p> <p style="text-align: center;">(Group A)</p> <ol style="list-style-type: none"> 1. Implementation of stack using array or linked list. Performing simple operations like push, pop and display with respect to stack. 2. Implementation of multi-stack / multi-queue in one array. Performing simple operations like push, pop and display with respect to multi-stack. 3. Implementation of queue using array or linked list. Performing simple operations like insertion and deletion of an element into the queue. 					

4. Implementation of circular queue using array or linked list.
Performing simple operations like insertion and deletion of an element into the circular queue.
5. Conversion of infix expression to postfix expression.
Performing simple conversions of given infix expression into postfix expression.
6. Conversion of postfix expression to infix expression.
Performing simple conversions of given postfix expression into infix expression.

(Group B)

1. Implementation of double linked list & perform insertion, deletion and searching.
Performing the operations on double linked list like insertion, deletion and searching.
2. Creation of binary tree & perform all non-recursive traversals.
Create the binary tree and perform the In-order, Preorder and Post-order traversal.
3. Creation of binary search tree & perform insertion, deletion and printing in tree shape.
Create the Binary Search tree performing the operations on BST like insertion, deletion and printing in tree shape.
4. Create a hash table and handle the collision using linear probing with or without replacement
Creation of hash Table and handle the collision using linear probing with or without replacement.
5. Write a program to construct an AVL tree for the given set of keys. Also write function for deleting a key from the given AVL tree.
6. Implementation of Heap sort algorithm Sort the input data using Max-heap/Min-heap algorithm

Note: Use of Open Source Software/Tool/Technology is recommended for laboratory assignments of concern subject.

Text Books:

7. RS Salaria, Data Structures, Khanna Publishing House

8. Yashwant Kanetkar, Data Structures through C, BPB Publications
9. RB Patel, Expert Data Structures with C++, Khanna Publications

Guide lines for ICA:

Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.

Guidelines for ESE:

ESE will be based on the practical assignments submitted by the students in the form of journal. In the ESE (PR), the students may be asked to perform the practical assignment with minor modification.

Evaluation will be based on the paper work of algorithm, understanding of the logic and the syntax, quality of the program, execution of the program, type of input and output for the program.

Computer Organization and Architecture Lab					
LAB COURSE OUTLINE					
Course Title:	Computer Organization and Architecture Lab	Short Title:	COAL	Course Code:	
Course description:					
This laboratory provides students with a comprehensive study of the basic concepts of 8086 microprocessor and its programming. The lab provides the students with the means of writing efficient 8086 assembly language programs, use of software interrupts & their functions, and single step execution of a program.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	2	14	28	1	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Fundamental knowledge of DOS/Windows Commands and 8086 Assembly Language Programming					
Course objectives:					
<ol style="list-style-type: none"> 1. How to write algorithm and develop the logic of any program. 2. To assemble and execute 8086 assembly language program. 3. To debug the 8086 assembly language program in single step mode. 4. To use software interrupts in an 8086 assembly language program. 					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Apply DOS/BIOS interrupts and its functions for input and output operations. 2. Identify and apply 8086 assembly language macro. 3. Understand and apply 8086 assembly language NEAR and FAR procedure 4. Apply various string matching operations. 					
LAB COURSE CONTENT					
Computer Organization and Architecture Lab			Semester:	IV	
Teaching Scheme:			Examination scheme		
Practical:	2 hours/week		End semester exam (ESE):	25 marks	
			Internal Continuous Assessment (ICA):	25 marks	
Concerned faculty member should suitably frame at least 10 laboratory assignments using 8086 Assembly Language Programming from the following list.					

1. Study of DOS and BIOS interrupts and 8086 Assembler Directives.
2. Program using MACRO: Display personal information using MACRO.
3. Program for Addition/Subtraction of 2 numbers using NEAR procedure.
4. Program for Addition/Subtraction of 2 numbers using FAR procedure.
5. Program for Multiplication/Division of 2 numbers using NEAR procedure.
6. Program for Multiplication/Division of 2 numbers using FAR procedure
7. Program to find out Factorial of any given number using recursive procedure.
8. Program for Password Verification
9. Program to add two BCD numbers.
10. Program for BCD to HEX conversion.
11. Program for HEX to BCD conversion.
12. Program to display System Date/Time.
13. Program using Structure.
14. Program to generate Fibonacci Series.
15. Program for block transfer from one segment to another segment
16. Program to sort the given array in ascending and descending order.

Note: Use of Open Source Software/Tool/Technology is recommended for laboratory assignments of concern subject.

Text Books:

1. Douglas V Hall, Microprocessor and Interfacing, Programming and Hardware, Tata McGraw Hill, Revised 2nd edition.
2. “IBM PC Assembly Language and Programming”, 5th edition by Peter Abel, Pearson.

3. Barry B Bray, “The Intel Microprocessors-Architecture, Programming and Interfacing”, Pearson LPE/PHI, 7th Edition.
4. B. Ram, Computer Fundamentals Architecture and Organization, New Age International
5. Rajaraman, Computer Organization & Architecture, PHI Learning

Guide lines for ICA:
Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.
Guidelines for ESE:
ESE will be based on the practical assignments submitted by the students in the form of journal. In the ESE (PR), the students may be asked to perform the practical assignment with minor modification. Evaluation will be based on the paper work of algorithm, understanding of the logic and the syntax, quality of the program, execution of the program, type of input and output for the program.

IT Workshop					
LAB COURSE OUTLINE					
Course Title:	IT Workshop	Short Title:	ITW	Course Code:	
Course description:					
This course deals with the basic simulation operations like one dimensional, two dimensional array, matrix manipulations, vectors, trigonometric functions like sine, tan , cosine with Matlab / Scilab simulation software.					
	Hours/week	No. of weeks	Total hours	Semester credits	
Theory	1	14	14	2	
Laboratory	2	14	28		
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Fundamental concepts of Mathematics					
Course objectives:					
<ol style="list-style-type: none"> 1. To familiarize the students in introducing and exploring MATLAB/Scilab / Any other equivalent open source software. 2. To enable the students on how to approach for solving Engineering problems using simulation tools. 3. To prepare the students to use MATLAB/Scilab / Any other equivalent open source software in their project works. 4. To provide a foundation in use of this software for real time applications 					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Express procedure, algorithm, programming & simulation for engineering problems. 2. Find importance of MATLAB/Scilab / Any other equivalent open source software for Laboratory Experimentation. 3. Articulate importance of software in research by simulation work. 4. Write basic mathematical, electrical, electronic problems in MATLAB 					
LAB COURSE CONTENT					
IT Workshop			Semester:	IV	
Teaching Scheme:			Examination scheme		
Theory	1 hour / week		End semester exam (ESE):		25 marks
Practical:	2 hours/week		Internal Continuous Assessment (ICA):		25 marks
<p>Creating a One-Dimensional Array (Row / Column Vector) Exercise – Creating a vector of even whole numbers between 31 and 75;</p> <p>Creating a Two-Dimensional Array (Matrix of given size) and (A) Performing Arithmetic</p>					

Operations - Addition, Subtraction, Multiplication and Exponentiation. (B) Obtaining Modified Matrix - Inverse, Transpose, with Appended and Deleted Elements;

Performing Matrix Manipulations - Concatenating, Indexing, Sorting, Shifting, Reshaping, Resizing and Flipping about a Vertical Axis / Horizontal Axis;

Creating Arrays X & Y of given size (1 x N) and Performing

(A). Relational Operations - >, <, ==, <=, >=, ~=

(B). Logical Operations - ~, &, |, XOR

Generating a set of Commands on a given Vector (Example: X = [1 8 3 9 0 1]) to

(A). Add up the values of the elements (Check with **sum**)

(B). Compute the Running Sum (Check with **sum**), where Running Sum for element j = the sum of the elements from 1 to j, inclusive.

(C). Compute the Sine of the given X-values (should be a vector).

Also, Generating a Random Sequence using **rand()** / **randn()** functions and plotting them.

Evaluating a given expression and rounding it to the nearest integer value using **Round**, **Floor**, **Ceil** and **Fix** functions; Also, generating and Plots of

(A) Trigonometric Functions - $\sin(t)$, $\cos(t)$, $\tan(t)$, $\sec(t)$, $\operatorname{cosec}(t)$ and $\cot(t)$ for a given duration

(B). Logarithmic and other Functions – $\log(A)$, $\log_{10}(A)$, Square root of A, Real nth root of A.

Generating a Sinusoidal Signal of a given frequency (say, 100Hz) and Plotting with Graphical Enhancements - Titling, Labelling, Adding Text, Adding Legends, Adding New Plots to Existing Plot, Printing Text in Greek Letters, Plotting as Multiple and Sub-Plots; Also, Making Non-Choppy and Smooth Plot of the functions,

$f(x) = \sin(1/x)$ for $0.01 < x < 0.1$ and $g(x) = (\sin x) / x$.

Concern faculty member should suitably frame at least FOUR laboratory assignments from the Group A and FOUR laboratory assignments from the Group B using MatLab / SciLab / any other equivalent open source software from the following list.

Group- A

Matrix operation

1. Create one/two Dimensional Array
2. Insertion and Deletion of element in array.
3. Perform arithmetic operations on array (Addition, Subtraction, Multiplication, Division, Exponentiation, Inverse, Transpose etc.)
4. Performing Matrix Manipulation-Concatenating, Indexing, Sorting, Shifting, Reshaping, Resizing and Flipping about a Vertical Axis/ Horizontal Axis.
5. Perform Relational and Logical operations on two matrix like

a. Relational Operations- >, <, ==, <=, >=, ~=.

b. Logical Operations- \sim , $\&$, $|$, XOR

Group - B

Write an expression and Perform Plot operation

1. Write a linear and differential expression and round it to the nearest integer value using Round, Floor, Ceil and Fix operations.
2. Using linear expression plot the
 - a. Trigonometric functions- $\sin(t)$, $\cos(t)$, $\tan(t)$, $\cot(t)$, $\sec(t)$, $\operatorname{cosec}(t)$.
 - b. Logarithmic functions- $\log(A)$, $\log_{10}(A)$, Square root of A, Real n 'th root of A.

Generating a Sinusoidal Signal of a given frequency (say, 100Hz) and Plotting with Graphical Enhancements – Title, Labeling, Adding Text, Adding Legends.

3. Generating multiple and subplot for sine, cos, square, triangular etc.
4. Creating a vector X with elements, $X_n = \frac{(-1)^{n+1}}{(2n-1)}$ and adding up 100 elements of the vector, X; And, plotting the functions, x , x^3 , e^x and $\exp(x^2)$ over the interval $0 < x < 4$ on
 - (A) A Rectangular Plot
 - (B) A Semi log Plot
 - (C) A log-log Plot

Note: Use of Open Source Software/Tool/Technology is recommended for laboratory assignments of concern subject.

Evaluation will be based on the paper work of algorithm, understanding of the logic and the syntax, quality of the program, execution of the program, type of input and output for the program.

Environmental Studies					
COURSE OUTLINE					
Course Title:	Environmental Studies	Short Title:	EVS	Course Code:	Non Credit
Course description:					
The course aims to percolate the importance of environmental science and environmental studies.					
COURSE CONTENT					
Environmental Studies		Semester:		IV	
		Examination scheme			
		End Semester Exam (ESE):		80 marks	
		Duration of ESE:		03 hours	
		Internal Continuous Assessment (ICA):		20 marks	
Unit–I:		No. of Lectures: 02 Hours			
Multidisciplinary nature of environmental studies					
Definition, scope and importance Need for public awareness.					
Unit–II:		No. of Lectures: 08 Hours			
Natural Resources :					
Renewable and non-renewable resources					
Natural resources and associated problems.					
<ul style="list-style-type: none"> a. Forest resources : Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. b. Water resources : Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. c. Mineral resources : Use and exploitation, environmental effects of extracting and using mineral resources, case studies. d. Food resources : World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. e. Energy resources : Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies. f. Land resources : Land as a resource, land degradation, man induced landslides, soil erosion and desertification. 					
<ul style="list-style-type: none"> • Role of an individual in conservation of natural resources. • Equitable use of resources for sustainable lifestyles. 					
Unit–III:		No. of Lectures: 06 Hours			
Ecosystems					
<ul style="list-style-type: none"> • Concept of an ecosystem. 					

- Structure and function of an ecosystem.
- Producers, consumers and decomposers.
- Energy flow in the ecosystem.
- Ecological succession.
- Food chains, food webs and ecological pyramids.
- Introduction, types, characteristic features, structure and function of the following ecosystem :-
 - a. Forest ecosystem
 - b. Grassland ecosystem
 - c. Desert ecosystem
 - d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit-IV:

No. of Lectures: 08 Hours

Biodiversity and its conservation

- Introduction – Definition : genetic, species and ecosystem diversity.
- Biogeographic classification of India
- Value of biodiversity : consumptive use, productive use, social, ethical, aesthetic and option values
- Biodiversity at global, National and local levels.
- India as a mega-diversity nation
- Hot-spots of biodiversity.
- Threats to biodiversity : habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India
- Conservation of biodiversity : In-situ and Ex-situ conservation of biodiversity.

Unit-V:

No. of Lectures: 08 Hours

Environmental Pollution

Definition

- Cause, effects and control measures of :-
 - a. Air pollution
 - b. Water pollution
 - c. Soil pollution
 - d. Marine pollution
 - e. Noise pollution
 - f. Thermal pollution
 - g. Nuclear hazards
- Solid waste Management : Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution.
- Pollution case studies.

<ul style="list-style-type: none"> Disaster management : floods, earthquake, cyclone and landslides. 		
<p style="text-align: center;">Unit–VI: No. of Lectures: 07 Hours</p>		
<p>Social Issues and the Environment</p> <ul style="list-style-type: none"> From Unsustainable to Sustainable development Urban problems related to energy Water conservation, rain water harvesting, watershed management Resettlement and rehabilitation of people; its problems and concerns. Case Studies Environmental ethics : Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear Accidents and holocaust. Case Studies. Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of Pollution) Act Wildlife Protection Act Forest Conservation Act Issues involved in enforcement of environmental legislation. Public awareness. 		
<p style="text-align: center;">Unit–VII: No. of Lectures: 06 Hours</p>		
<p>Human Population and the Environment</p> <ul style="list-style-type: none"> Population growth, variation among nations. Population explosion – Family Welfare Program Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare. Role of Information Technology in Environment and human health. Case Studies. 		
<p style="text-align: center;">Unit–VIII: No. of Lectures:</p>		
<p>Field work</p> <ul style="list-style-type: none"> Visit to a local area to document environmental assets, river / forest / grassland / hill / mountain Visit to a local polluted site-Urban/Rural/Industrial/Agricultural 		

- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc. (Field work Equal to 5 lecture hours)

Guide lines for ICA:

Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.
