COURSE OUTLINE

Semester – III

w. e. f. 2018 – 19

MATHEMATICS-III					
COURSE OUTLINE					
Course Title:	Mathematics III	Short Title:	M-III	Course Code:	
Course description:					
This course is an advanced level Engineering Mathematics which will further strengthen the knowledge of the students who have completed Engineering Mathematics –I and II in their first year. The course coverage explores Basic Probability, Continuous Probability Distributions, Basic Statistics, Applied Statistics, Small samples and Bivariate Distributions. The goal of this course is to understand various functions of probability and statistics and their applications in engineering field.					
	Hours/week	No. of weeks	Total hours	Semester credits	
Lecture	03	14	42	04	
Tutorial	01	14	14		
Prerequisite course (s):					
Knowledge of HSC, Applied Mathematics - I & II subject of first year of engineering.					
Course objectives:					
<ol style="list-style-type: none"> 1. To introduce the solution methodologies for second order Partial Differential Equations with applications in engineering. 2. To provide an overview of probability and statistics to engineers. 					
Course outcomes:					
<ol style="list-style-type: none"> 1. Upon completion of this course, students will be able to solve field problems in engineering involving PDEs. 2. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data. 					
COURSE CONTENT					
Mathematics-III			Semester:	III	
Teaching Scheme:			Examination scheme		
Lectures:03	3 hours/week	End semester exam (ESE):		60 marks	
Tutorial:01	1 hours/week	Duration of ESE:		03 hours	
		Internal Sessional Exams (ISE):		40 marks	
Unit–I:		No. of Lectures: 8 Hours		Marks: 12	
Laplace Transform: Properties of Laplace Transform, Inverse Laplace transform, Convolution theorem. Evaluation of integrals by Laplace transform, solving ordinary differential equations by Laplace Transform.					
Unit–II:		No. of Lectures: 08 Hours		Marks: 12	
Fourier Transform and Z-transform					
Fourier sine and cosine integrals, Fourier sine transform, Fourier cosine transform, Inverse					

Fourier transform. Z – Transform: Definition, Region of convergence, Properties of Z-Transform, Inverse Z-Transform		
Unit–III	No. of Lectures: 8 Hours	Marks: 12
Basic Statistics Measures of Central tendency, Moments, skewness and Kurtosis, Binomial, Poisson and Normal distributions, Correlation and regression.		
Unit–IV	No. of Lectures: 08 Hours	Marks: 12
Applied Statistics Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves. Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations.		
Unit–V:	No. of Lectures: 8 Hours	Marks: 12
Small samples : T-distribution for small sample -Test for single mean, difference of means and correlation coefficients, test for ratio of variances, F-test for equality of population variances. Chi-square test for goodness of fit and independence of attributes.		
Text Books:-		
1. H. K. Dass “Advance Engineering Mathematics” S. Chand publications. 2. N.P. Bali and M. Goyal, “A text book of Engineering Mathematics”, Laxmi Publications, 2016. 3. S. C. Gupta “Fundamentals of Statistics”, Himalaya Publishing House.		
Reference Books		
1. E. Kreyszig, “Advanced Engineering Mathematics”, John Wiley & Sons, 2006. 2. P. G. Hoel, S. C. Port and C. J. Stone, “Introduction to Probability Theory”, Universal Book Stall, 2003. 3. S. Ross, “A First Course in Probability”, Pearson Education India, 2002. 4. B.S. Grewal, “Higher Engineering Mathematics”, Khanna Publishers, 2000. 5. T. Veerarajan, “Engineering Mathematics”, Tata McGraw-Hill, New Delhi, 2010.		

Numerical Techniques					
COURSE OUTLINE					
Course Title:	Numerical Techniques		Short Title:	NT	Course Code:
Course description:					
This course provides knowledge of numerical methods and optimization techniques					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	03	14	42	03	
Prerequisite course(s):					
Knowledge of mathematics and science at HSC & First Year Engineering.					
Course objectives:					
To familiarize with number system in computations, polynomial equations, concept of roots of an equation & methods to find the same. To study various differentiation & integration methods. To understand the tradeoff between programming ease, computation time, data storage, truncation and round off errors.					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Solve polynomial and transcendental equations, 2. Solve linear algebraic equations, simultaneous equations. 3. Solve Interpolate by Lagrange's & Newton methods. 4. Solve ordinary differential equations by using Euler's method, Runge Kutta method, Taylor's Method and predictor - corrector method. 5. Develop computer program for above methods. 6. Do higher studies in power system such as load flow study and power system optimization. 					
COURSE CONTENT					
Numerical Techniques			Semester:	III	
Teaching Scheme:			Examination scheme		
Lectures:	3 hours/week		End semester exam (ESE):	60 marks	
			Duration of ESE:	03 hours	
			Internal Sessional Exams (ISE):	40 marks	
Unit-I:		No. of Lectures: 09 Hours	Marks: 12		
Number systems & errors in digital computations, Transcendental & polynomial equations, Concept of roots of an equation & methods to find the same. Secant method, Newton- Raphson method, Regula-Falsi method.					

Unit-II:	No. of Lectures: 09 Hours	Marks: 12
Linear algebraic simultaneous equations:		
Method of matrix Inversion, Gauss method, Gauss Elimination, Gauss Jordan, Jacobi Iteration, Triangular Factorization (L-U Factorization), Gauss Seidal method		
Unit-III:	No. of Lectures: 08 Hours	Marks: 12
Interpolation:		
Newton's forward and backward interpolation formula, Gauss's forward and backward interpolation formula, Lagrange formula and inverse Lagrange formula, Newtons Divided difference formula, Least squares approximation.		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
Differentiation & Integration:		
Central difference interpolation formula-Stirling's formula, Newton's forward and backward difference formulae for derivatives, Integration using Simpson's rule ($1/3^{\text{rd}}$ rule and $3/8^{\text{th}}$ Rule), Trapezoidal rule.		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
Ordinary differential equations and their solutions: Taylor series method, Euler's method, Runge-Kutta methods, predictor-corrector methods.		
Text Books:		
<ol style="list-style-type: none"> 1. Jain & Iyengar, "Numerical Methods for Scientific & Engineering Computation", New Age international, 3rd edition. 2. S. K. Gupta, "Numerical Methods for Engineers", New Age international. 3. Anita, "Numerical Methods for Scientists & Engineers", Tata McGraw Hill. 4. S.S. Shashtry, "Introductory Methods of Numerical", Tata McGraw Hill, 5th edition. 5. Rajaraman, "Numerical Methods & Computations", Tata McGraw Hill, 3rd edition. 6. Kanti Swarup, P. K. Gupta, Man Mohan, "Operation Research", Sultan Chand & Son, 13th edition. 7. Yashwant Kanitkar., "Let us C", BPP Publication, 15th edition. 8. Kandasamy P. Thilagavathy K. and Gunavathy K., " Numerical Methodes", S. Chand Co. Ltd., 2003. 		
Reference Books:		
<ol style="list-style-type: none"> 1. Dr. B. S. Grewal, "Numerical Methods in Engineering and Science", Khanna Publishers 		

Electrical Circuit Analysis					
COURSE OUTLINE					
Course Title:	Electrical Circuit Analysis	Short Title:	ECA	Course Code:	
Course description:					
Introducing the topic and illustrating its importance for electrical engineering field. The concept of magnetic coupling– Analysis of magnetic coupled circuits– Linear transformers– Ideal transformers– Two-port networks and it's different equation forms– Evaluation of its parameter– Analysis of terminated two-port circuits– Interconnected two-port networks– Revision and a set of solved examples. Understanding of different types of network theorems. Getting familiar with steady state and transient responses for different types of circuits. Laplace transform and relation between current and voltage for resistance, capacitance and inductance– Laplace transform and electric circuit sources. Understanding the concepts of two port network.					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	03	14	42	03	
Prerequisite course(s):					
Magnetic Coupling, Resonant Circuits, Network Theorems, Series-Parallel Circuit, Laplace Transform					
Course objectives:					
<ol style="list-style-type: none"> 1. To make the students capable of analyzing any given electrical network. 2. To make the students learn how to synthesize an electrical network from a given impedance/admittance function. 3. To relate various two port parameters and transform them. 					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Study of magnetic coupling and resonance. 2. Apply network theorems for the analysis of electrical circuits. 3. Obtain the transient and steady-state response of electrical circuits. 4. Analyze circuits using Laplace transform. 5. Analyze two port circuit behaviors. 					
COURSE CONTENT					
Electrical Circuit Analysis			Semester:	III	
Teaching Scheme:			Examination scheme		
Lectures:	3 hours/week		End semester exam (ESE):		60 marks
			Duration of ESE:		03 hours
			Internal Sessional Exams (ISE):		40 marks
Unit-I:		No. of Lectures: 08 Hours		Marks: 12	

Magnetic Coupling and Resonance		
Coupled Circuits: Self inductance and Mutual inductance, Coefficient of coupling, dot convention, Ideal Transformer, Analysis of multi winding coupled circuits, Analysis of single tuned and double tuned coupled circuits. Resonant Circuits: Series and parallel resonance, frequency- response of series and Parallel circuits, Q-Factor, Bandwidth.		
Unit-II:	No. of Lectures: 08 Hours	Marks: 12
Network Theorems		
Superposition theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer theorem, Reciprocity theorem, Compensation theorem. Analysis with dependent current and voltage sources. Node and Mesh Analysis, Super Mesh and Node analysis, Millmans Theorem.		
Unit-III:	No. of Lectures: 08 Hours	Marks: 12
Solution of First and Second order networks		
Solution of first and second order differential equations for Series and parallel R-L, R-C, RL-C circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response.		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
Electrical Circuit Analysis Using Laplace Transforms		
Review of Laplace Transform, Analysis of electrical circuits using Laplace Transform for standard inputs, convolution integral, inverse Laplace transform, transformed network with initial conditions. Fourier Series and Fourier Transform of Standard Signals.		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
Two Port Network and Network Functions		
Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters, admittance parameters, transmission parameters and hybrid parameters, relationship between parameters, interconnections of two port networks.		
Text Books:		
<ol style="list-style-type: none"> 1. M. E. Van Valkenburg, "Network Analysis", Prentice Hall, 2006. 2. D. Roy Choudhury, "Networks and Systems", New Age International Publications. 3. A. Charaborthy, "Circuit Theory (Analysis and Synthesis)", Dhanpat Rai and Co. 4. W. H. Hayt and J. E. Kemmerly, "Engineering Circuit Analysis", McGraw Hill Education, 2013. 5. K. V. V. Murthy and M. S. Kamath, "Basic Circuit Analysis", Jaico Publishers. 		
Reference Books:		
<ol style="list-style-type: none"> 1. Kuo F. F., "Network Analysis and Synthesis", Wiley India, 2nd Edition, 2008. 2. C. K. Alexander and M. N. O. Sadiku, "Electric Circuits", McGraw Hill Education, 2004. 		

Electrical Machines-I					
COURSE OUTLINE					
Course Title:	Electrical Machines-I	Short Title:	EMC-I	Course Code:	
Course description:					
This course provides knowledge about D. C. machines and transformers to familiarize students with construction, their working, operation, performance and applications of Dc machines and Transformer.					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	03	14	42	03	
Prerequisite course(s):					
Knowledge of subject Introduction to Electrical Engineering at first year.					
Course objectives:					
The course aimed at acquiring an understanding on basic principles, operation, performance and control of dc machine and transformer. The subject is helpful in the studies of technological aspects such as utilization of electrical energy, switch gear & protection, manufacturing processes & testing & maintenance of electrical machines. The subject provides scope for higher study and able to use updated software.					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Apply basic knowledge of science and engineering for understanding the concept of magnetic circuit, electrical machines and transformer. 2. Explain construction, concepts, principles of operation & testing of dc machines and transformers. 3. Analyze data for qualitative and quantitative parameters to determine characteristics of machines. 4. Apply knowledge of electrical machines for technological subjects such as utilization of electrical energy, switch gear & protection, manufacturing processes and safety precautions. 5. Perform professional duties in team of manufacturing, testing, operation and maintenance with the sense of safety precautions. 6. Do higher studies and able to use updated software for continuous updating of knowledge. 					
COURSE CONTENT					
Electrical Machines-I			Semester:	III	
Teaching Scheme:			Examination scheme		
Lectures:	3 hours/week		End semester exam (ESE):	60 marks	
			Duration of ESE:	03 hours	
			Internal Sessional Exams (ISE):	40 marks	
Unit-I:		No. of Lectures: 08 Hours		Marks: 12	
Magnetic fields and magnetic circuits					
Review of magnetic circuits - MMF, flux, reluctance, inductance; review of Ampere Law and					

Biot Savart Law; influence of highly permeable materials on the magnetic flux lines.		
Electromagnetic force and torque		
B-H curve of magnetic materials; flux-linkage Vs current characteristic of magnetic circuits; linear and nonlinear magnetic circuits; energy stored in the magnetic circuit; Principle of energy conversion, single excite magnetic system, physical concept of torque production, electromagnetic torque		
Unit-II:	No. of Lectures: 08 Hours	Marks: 12
DC machines		
Basic construction of a DC machine, magnetic structure - stator yoke, stator poles, pole-faces or shoes, air gap and armature core, visualization of magnetic field produced by the field winding excitation with armature winding open, air gap flux density distribution, flux per pole, induced EMF in an armature coil. Armature winding and commutation - Elementary armature coil and commutator, lap and wave windings, construction of commutator, linear commutation Derivation of back EMF equation, armature MMF wave, derivation of torque equation, armature reaction, air gap flux density distribution with armature reaction.		
Unit-III:	No. of Lectures: 08 Hours	Marks: 12
DC machine - motoring and generating		
Armature circuit equation for motoring and generation, Types of field excitations - separately excited, shunt and series. Open circuit characteristic of separately excited DC generator, back EMF with armature reaction, voltage build-up in a shunt generator, critical field resistance and critical speed. V-I characteristics and torque-speed characteristics of separately excited, shunt and series motors. Speed control through armature voltage. Losses, No load test Swinburne's test load testing and back-to-back testing of DC machines.		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
Transformers –Single Phase		
Principle, construction and operation of single-phase transformers, equivalent circuit, phasor diagram, voltage regulation, losses and efficiency Testing - open circuit and short circuit tests, polarity test, back-to-back test, separation of hysteresis and eddy current losses. Parallel operation of single-phase Autotransformers - construction, principle, applications and comparison with two winding transformer		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
Transformers –Three Phase		
Three-phase transformer - construction, types of connection and their comparative features, Parallel operation of three-phase transformers, Autotransformers - construction, principle, applications and comparison with two winding transformer, Magnetizing current, effect of nonlinear B-H curve of magnetic core material, harmonics in magnetization current, Phase conversion - Scott connection, three-phase to six-phase conversion, Tap-changing transformers - No-load and on-load tap-changing of transformers, Three-winding transformers. Cooling of transformers.

Industrial Organization & Management					
COURSE OUTLINE					
Course Title:	Industrial Organization & Management	Short Title:	IOM	Course Code:	
Course description:					
The course explores concepts of management and functioning of organizations. It introduces both theoretical concepts and empirical applications, focusing particularly on production industries. Management studies have influenced every aspect of business thinking and planning. Apart from this, it also influenced our day-to-day lives in the form of technological advancements. The syllabus explores the knowledge of principle of management, financial management, human resource management, operational management and marketing management.					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	03	14	42	3	
Prerequisite course(s):					
Knowledge of HSC and First year Engineering.					
Course objectives:					
This subject is designed to expose the students to fundamental concepts of management, its processes and behavioral dynamics in organizations. It will also look at recent developments in business in the context of economic theory. It also aims at making students understand concepts, philosophies, and processes of managing the marketing & financial operations of a firm.					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Understand various aspects of management. 2. Understand the concepts of human resource management, marketing management, financial management, production and operation management 3. Estimate the financial feasibility of business and identify the various sources of financing Understand different industrial laws in views of safety, pollutions and societal developments. 4. Discharge professional duties in field of manufacturing and operational management. 5. Function on multidisciplinary teams and able to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. Does higher study in various new disciplines in the area of management like entrepreneurs in view of economic objectives of country, such as industrial development, regional growth, employment generation and development. 					
COURSE CONTENT					
Industrial Organization & Management			Semester:		III

Teaching Scheme:		Examination scheme	
Lectures:	3 hours/week	End semester exam (ESE):	60 marks
		Duration of ESE:	03 hours
		Internal Sessional Exams (ISE):	40 marks
Unit-I:	No. of Lectures: 08 Hours	Marks: 12	
Principles of Management			
<p>Basic Concepts: Definition, Nature, Importance, Management: Art and Science & as a Profession, Management Vs Administration, Evolution of Management: Introduction to Scientific Management by Taylor, Administrative, Management by Fayol, Contribution of Peter Drucker, Levels & Functions of Management, Forms of Business Organization.</p> <p>Approaches to Management: Decision Theory Approach, Contingency Approach, Systems Approach.</p> <p>Organization: Formal & Informal, Line & Staff relationship, Centralization vs. Decentralization, Span of Management, Departmentation, MBO.</p>			
Unit-II:	No. of Lectures: 08 Hours	Marks: 12	
Managerial Economics			
<p>Introduction: Meaning & Scope of Economics, Basic Theories, Law of Demand & Supply, Elasticity of Demand & Supply.</p> <p>Consumer Theories: Meaning of Utility & Law of Diminishing Utility. Cost Concepts: Opportunity Costs, Sunk Costs, Marginal Cost, Total & Variable Costs, Fixed Costs, Contribution, Law of Diminishing Return.</p>			
Unit-III:	No. of Lectures: 08 Hours	Marks: 12	
Operational Management			
<p>Plant location and layout: Factor affecting plant location, different type of plant layout, CPM PERT, quality control manufacturing system, store and inventory control</p> <p>Work study – techniques of work study method study, work measurement, different charts and diagrams used in method study.</p>			
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12	
Human Resource Management			
<p>Human resource planning, Recruitment, Selection, Placement & Induction, Performance Appraisal & Development, Employee Training, Internal & External Mobility & Retention Management, Wage & Salary Administration, Fringe Benefits & Incentives Payments, Collective Bargaining, Performance appraisal, compensation</p> <p>Industrial Laws: The factories Act 1947, The Workmen's Compensation Act 1923, Maternity Benefit Act The Payment of Wages Act 1936, The Apprentices Act 1961, industrial safety, prevention of accidents pollution control act</p>			

Unit-V:	No. of Lectures: 08 Hours	Marks: 12
Marketing Management & Financial Management		
<p>Introduction to Marketing: Concept of Market, Types of Market, Definition, Nature & Scope of Marketing, Marketing Approaches, Marketing Process, Functions of Marketing Management, 7 P's of Marketing. Advertising media of advertising market forecasting.</p> <p>New trends in Marketing: Green Marketing, e- marketing & Viral Marketing.</p> <p>Introduction to Financial Management: Meaning, Nature & Scope of Financial Management, Capital Structure, Types & Sources of Finance, Money Market & Capital Market, Role of Financial Institutions in Industry.</p>		
Text Books:		
<ol style="list-style-type: none"> 1. P. Khanna, "Industrial Engineering Managements" 2. S. Chand by S. S. Khanka "Human resource Management" (Text & Cases) 		
Reference Books:

Electrical Circuit Analysis Laboratory					
LAB COURSE OUTLINE					
Course Title:	Electrical Circuit Analysis Laboratory	Short Title:	ECA Lab.	Course Code:	
Course description:					
Introducing the topic and illustrating its importance for electrical engineering field. The concept of magnetic coupling – Analysis of magnetic coupled circuits – Linear transformers – Ideal transformers – Two-port networks and it's different equation forms – Evaluation of its parameter – Analysis of terminated two-port circuits– Interconnected two-port networks– Revision and a set of solved examples. Understanding of different types of network theorems. Getting familiar with steady state and transient responses for different types of circuits. Laplace transform and relation between current and voltage for resistance, capacitance and inductance – Laplace transform and electric circuit sources. Understanding the concepts of two port network.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	02	14	28	01	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Introduction to Electronics Engineering at First Year					
Course objectives:					
Students should be able to do hands on and get familiar with the practical aspects of various network theorems, various parameters such as Z- Parameters, Y- parameters, ABCD Parameters and H- Parameters, Filters.					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Apply network theorems for the analysis of electrical circuits. 2. Obtain the transient and steady-state response of electrical circuits. 3. Analyze two port circuit behaviors. 4. Analyze filter circuits. 					
LAB COURSE CONTENT					
Electrical Circuit Analysis Laboratory		Semester:		III	
Teaching Scheme:		Examination scheme			
Practical:	2 hours/week	End semester exam (ESE):		25 marks	
		Internal Continuous Assessment (ICA):		25 marks	
Teacher should facilitate learning following lab experiments:					

1. Verifications of Thevenin's Theorem.
2. Verification of Maximum Power Transfer Theorem.
3. Verification of Superposition Theorem.
4. Verification of Nortons Theorem
5. Pole and Zero plot of one port network.
6. Measurement of hybrid parameter of two port network.
7. Measurement of ABCD parameter of two port network.
8. Measurement of Y parameter of two port network.
9. Measurement of Z parameter of two port network.
10. Frequency response, quality factor and bandwidth of Series Resonance Circuit
11. Frequency response of Parallel Resonance Circuit.

Note: Lab file should consist of minimum **Eight** experiments.

Text Books:

1. M. E. Van Valkenburg, "Network Analysis", Prentice Hall, 2006.
2. D. Roy Choudhury, "Networks and Systems", New Age International Publications, 1998.
3. A. Chakraborty, "Circuit Theory (Analysis and Synthesis)", Dhanpat Rai and Co.
4. W. H. Hayt and J. E. Kemmerly, "Engineering Circuit Analysis", McGraw Hill Education, 2013.
5. K. V. V. Murthy and M. S. Kamath, "Basic Circuit Analysis", Jaico Publishers, 1999.

Reference Books:

1. Kuo F. F., "Network Analysis and Synthesis", 2nd Ed., Wiley India. 2008.
2. C. K. Alexander and M. N. O. Sadiku, "Electric Circuits", McGraw Hill Education, 2004.

Guide lines for ICA:

ICA shall be based on continuous evaluation of student performance throughout semester and practical assignment submitted by the student in the form of journal.

Guidelines for ESE:

In ESE the student may be asked to perform any one practical. Evaluation will be based on paper work, performance and oral in the practical examination.

Electrical Machines-I Laboratory					
LAB COURSE OUTLINE					
Course Title:	Electrical Machines-I Laboratory	Short Title:	EMC-I Lab	Course Code:	
Course description:					
In this laboratory, course emphasis on imparting the practical knowledge and understanding of basic principles, characteristic, performance and testing of DC Machines, Speed control DC Motor and use of other measuring equipment their class of accuracy. It also gives the platform to understand construction, working, performance, testing and selection of transformer.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	02	14	28	01	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Knowledge of HSC and First year Engineering.					
Course objectives:					
The objective of the laboratory is to impart the fundamental knowledge of Machines and transformers. Students will be able to develop their ability to apply the specific procedures for analyze the experimental results. The students will be able to understand the characteristic of DC machines and application in process and manufacturing. Application of transformer in power system. In this lab course, students will be familiar with the use of different equipments, safety precautions on work place. This makes bridge on theoretical knowledge and practical practices.					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Select suitable DC machines and transformers for industrial application. 2. Determine characteristics of different type of generator, motors and transformers. 3. Analyze the test data for practical for applications, design and manufacturing processes. 4. Control dc motors as per industrial applications. 5. Able to adopt safety precautions in industries. 6. Do professional duties in technical field for economical development. 					
LAB COURSE CONTENT					
Electrical Machines-I Lab		Semester:		III	
Teaching Scheme:		Examination scheme			
Practical:	2 hours/week	End semester exam (ESE):		25 marks	
		Internal Continuous Assessment (ICA):		25 marks	
Teacher should facilitate learning following lab experiments:					
<ol style="list-style-type: none"> 1. Determination of magnetization, external, internal characteristics and critical field resistance of d. c. shunt generator 2. Determination of external characteristics of d.c. compound generator as i) differential compound, ii) cumulative compound generator. 3. Speed control of D.C shunt motor by armature and field control. 					

4. i) Starting of DC motors using 3 and 4 point starters. ii) Reversal of motor rotation of D. C. motor.
5. Determination of performance characteristic of DC series motor by direct load.
6. Swinburne's tests on DC shunt Motor: Determination of losses & efficiency.
7. Polarity and Ratio test on single phase transformer/three phase transformer.
8. Determination of performance of single phase transformer by direct load test.
9. Determination of performance of single phase transformer by conducting Open circuit and short circuit test.
10. Parallel operation of two single phase transformer.
11. Study of phaser and vector group of three phase transformer.
12. Scott connection of two single phase transformer on no load and at balanced load.

Note: Lab file should consist of minimum **Eight** experiments.

Text Books:

1. Ashfaq Husain, "Electrical Machines", Dhanpat Rai & Co.
2. B. L. Theraja "Electrical Technology" Vol –I and II, S Chand Publication.

Reference Books:

1. E. Fitzgerald and C. Kingsley, "Electric Machinery", New York, McGraw Hill Education,
2. E. Clayton and N. N. Hancock, "Performance and design of DC machines", CBS Publishers,
3. M. G. Say, "Performance and design of AC machines", CBS Publishers, 2002.
4. P. S. Bimbhra, "Electrical Machinery", Khanna Publishers, 2011.
5. J. Nagrath and D. P. Kothari, "Electric Machines", McGraw Hill Education, 2010.

Guide lines for ICA:

ICA shall be based on continuous evaluation of student performance throughout semester and practical assignment submitted by the student in the form of journal.

Guidelines for ESE:

ESE will be based on practical assignment submitted by the student in the form of journal. In ESE the student may be asked to perform any one practical. Evaluation will be based on paper work and performance in the practical.

Electrical Workshop Laboratory					
LAB COURSE OUTLINE					
Course Title:	Electrical Workshop Laboratory	Short Title:	EWL	Course Code:	
Course description:					
This course provides the basic practical knowledge about the electrical electronics engineering. The course includes the study of different electrical symbols, electrical shocks and safety precautions, equipments used for the measurement and testing of electrical and electronics devices, different types of electronic circuits, The course may includes visit to the electrical industries or power plant for the enhancement of practical knowledge.					
	Hours/week	No. of weeks	Total hours	Semester credits	
Lecture	01	14	14	02	
Laboratory	02	14	28		
End Semester Exam (ESE) Pattern:		Oral (OR)			
Prerequisite course(s):					
Knowledge of H.S.C. and Introduction to Electrical Engineering and Introduction to Electronics Engineering.					
Course objectives:					
The objective of the course is to provide knowledge about practical practices used in electrical engineering. This course will help students to use various tools for measurement and testing of electrical apparatus. The subject provides scope for practical applications of electrical engineering. The course will also help students to use and implement efficient and techno commercial aspect of maintenance and installation.					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Understand various electrical symbols and their use in electrical electronics drawing. 2. Familiar with the safety precautions and practices while working in industrial and domestic premises. 3. Understand various maintenance schemes such as preventive, breakdown maintenance. 4. Select correct size and type of cables and wires for different applications. 5. Use different types of measuring instrument and instrumentation and testing equipments. 6. Select correct rating of fuse and MCB for protection scheme and safety. 7. Discharge the professional duties in technical field of maintenance and installation. 8. Practical exposure to different fabrication techniques. 9. Creation of simple components using different materials. 10. Acquire a minimum practical skill with respect to the different manufacturing methods 					
LAB COURSE CONTENT					

Electrical Workshop Laboratory		Semester:	III
Teaching Scheme:		Examination scheme	
Lectures:	1 hour/week	End semester exam (ESE):	25 marks
Practical:	2 hours/week	Internal Continuous Assessment (ICA):	25 marks
Theory:			
<p>Unit-I: Different types of electrical and electronics materials, Definition, properties and difference of conductor, insulator and semiconductor , Resistors, Capacitors and Inductors, DC/AC voltmeter and ammeter, Analog and digital multi-meter for the measurement of electrical quantities, CRO, Function Generator, Megger, Clip-on meter, Power factor meter, Lux meter.</p> <p>Unit-II: Cables: Classification of cable, Cables, Connectors and Switches, Cable standards and specifications, Insulating materials for cables, Cable joining, Coaxial cable, twisted pair cable, Flat ribbon cable Different wires, Size selection of wires, Standard wires TRC and CTS wires, Weather proof wires, Flexible wires.</p> <p>Unit-III: wiring accessories: Types of switches, Types of lamp holders, ceiling rose, mounting blocks, socket outlets plugs, wooden boards, Main switches, Junction boxes, Distribution boxes, fuse boards Domestic wiring and Lamp circuits: Simple circuit, series and parallel circuit, Fluorescent lamp circuits, domestic switch board wiring. Details and Layout of DC and AC Armature Windings.</p> <p>Unit-IV: Substation equipment: Classification and use of Lightening arrester, Different type of isolators. Substation earthing, Transformer: Standard rating, vector group of power transformer, Standard rating of instrument transformer, Class of accuracy for instrument transformer.</p> <p>Unit-IV: Starters: Three phase induction motor starter, Study of three phase induction motor reverse forward starter, Contactor, relay and timer circuit, Electronic ballast and fan regulator, Applications of electrical and electronic circuits for domestic and commercial purpose.</p>			
Teacher should facilitate learning following lab experiments:			
<ol style="list-style-type: none"> 1. Study and use of <ol style="list-style-type: none"> a. DC/AC voltmeter and ammeter. b. Analog and digital multi-meter for the measurement of electrical quantities. c. CRO, Function Generator d. Megger, Clip-on meter. e. Power factor meter. f. Lux meter 2. Identify and find the value using colour code chart and test different types of resistors. 3. Study of different Cables <ol style="list-style-type: none"> a. Classification of cable, types of three phase cable b. Cable standards and specifications c. Insulating materials for cables, cable joining 			

- d. Coaxial cable, twisted pair cable, flat ribbon cable.
- 4. Study of different wires
 - a. Size selection of wires
 - b. Standard wires TRC and CTS wires
 - c. Weather proof wires, flexible wires.
- 5. Study of wiring accessories
 - a. Types of switches
 - b. Types of lamp holders, ceiling rose, mounting blocks, socket outlets plugs, wooden board.
 - c. Main switches (ICDP/ICTP/MCB), Junction boxes, Distribution boxes, fuse boards.
- 6. Study of domestic wiring and Lamp circuits
 - a. Simple circuit, series and parallel circuit,
 - b. Fluorescent lamp circuits, domestic switch board wiring.
- 7. Study and layout of AC and DC armature windings
- 8. Study of substation equipment
 - a. Classification and use of Lightning arrester
 - b. Different type of isolators.
 - c. Substation earthing
- 9. Study of transformers
 - a. Standard rating, vector group of power transformer.
 - b. Standard rating of instrument transformer
 - c. Class of accuracy for instrument transformer.
- 10. Study of Starters:
 - a. Three phase induction motor starter.
 - b. Study of three phase induction motor reverse forward starter.
- 11. Study of different contactor, relay and timer with switching demonstration.
- 12. Study of electronic ballast and fan regulator
- 13. Fabrication of any small electrical/electronic circuit for domestic and commercial application.

Note: Lab file should consist of minimum **Eight** experiments.

(3rd Cycle)

COURSE OUTLINE

Semester – IV

w. e. f. 2018 – 19

Biology					
COURSE OUTLINE					
Course Title:	Biology	Short Title:	Bio	Course Code:	
Course description:					
This course is introduced for learning the basic fundamentals of Life sciences (zoology & Botany) to undergraduate students. The prospectus includes a prior knowledge of Biotechnology. The goals of the course are to understand the basic principles of Biology and its applications in the field of Engineering.					
	Hours/week	No. of weeks	Total hours	Semester credits 04	
Lecture	03	14	42		
Tutorial	01	14	14		
Prerequisite course(s):					
Course objectives:					
<ol style="list-style-type: none"> Students will understand the structures and characteristics or functions of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles. Students will learn the basic principles of inheritance at the molecular, cellular and Organism levels. Students will test and deepen their mastery of genetics by applying this knowledge in a variety of problem-solving situations. 					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> Use current techniques and analysis methods in molecular biology and genetics. Understand the current concepts in Cell Biology, Stem Cell Biology and Development. Know the structure/function of the basic components of prokaryotic and eukaryotic cells including macromolecules and organelles. Demonstrate proficiency with at least one instrument commonly used in biological research (microscope, etc). 					
COURSE CONTENT					
Name of the Subject: Biology			Semester:		IV
Teaching Scheme:			Examination scheme		
Lectures:	3 hours/week		End semester exam (ESE):		60 marks
			Duration of ESE:		03 hours
			Internal Sessional Exams (ISE):		40 marks
Unit-I		No. of Lectures: 08 Hours		Marks: 12	
Diversity of Organism and Cell Biology					

<p>Introduction: Living systems, Bio-mimicry, Metabolism, Taxonomy, Concept of species, Structural organization of life, Concepts of modern cell, history of cell, Cell theory, Structure of cell:- Cell shape, size and cell number, Types of cells:- Prokaryotic cells and Eukaryotic cells, Chemistry of cells.</p> <p>Cell Division: Cell cycle, mitosis, meiosis, mitotic cell division, cell cycle check points, meiotic cell division, embryonic cell division, cell death.</p>		
Unit-II	No. of Lectures: 08 Hours	Marks: 12
<p>Plant and Animal Kingdom</p> <p>Plant Kingdom: Introduction to plants, Salient features of major plant groups: Bryophyta, Pteridophyta, Gymnospermae, Angiospermae,</p> <p>Plant Growth & Development: Introduction, Seed Dormancy, Seed Germination, Phases of growth, Plant growth hormones.</p> <p>Animal Kingdom: Animal Classification, Salient features of non-chordates upto phylum level: Phylum porifera, phylum cindaria, phylum ctenophore, phylum platyhelminthes.</p>		
Unit-III	No. of Lectures: 08 Hours	Marks: 12
<p>Plant Cell and Animal cell culture and Applications</p> <p>Plant Cell Culture: Brief introduction to cell culture with respect to the properties of plant cells, Media requirements, Typical media used, Classification of tissue culture, callus culture, cell suspension culture, Application of callus culture and cell suspension culture, Plant cell cultivation Bioreactors</p> <p>Animal Cell Culture: Brief introduction to animal cell culture, Culture medium: Natural and Artificial media, introduction to balanced salt solutions and simple growth medium, Brief discussion on the chemical, physical and metabolic functions of different constituents of culture medium, Animal Bioreactors.</p>		
Unit-IV	No. of Lectures: 08 Hours	Marks: 12
<p>Microbial Culture and Applications: Introduction, Microbial Culture Techniques, growth curve, Pure culture techniques – microbial culture media, isolation, identification and maintenance of cultures, incidences of microorganisms in soil, water, air, food and sewage, food spoilage organisms, Applications of Microbial Culture Technology.</p>		
Unit-V	No. of Lectures: 08 Hours	Marks: 12
<p>Biotechnology and its Applications: Definitions, scope of Biotechnology, Recombinant DNA Technology: Making Recombinant</p>		

DNA, Tools in Genetic Engineering, Polymerase Chain reaction (PCR).

Applications of Biotechnology:

Bioinformatics, Biomechanics, Biotechnology of waste treatment, Biosensors, Forensic science, Food Biotechnology, Fermentation Technology.

Text Books:

1. B.D. Singh "Genetics" Kalyani Publications Third Edition.
2. C.B. Pawar "Cell Biology" Himalaya Publications, Third Edition.
3. C.B. Pawar "Cell and Molecular Biology" Himalaya Publications.
4. Text book of Zoology by V.K. Agrawal, S. Chand Publication.
5. Text book of Botany by Dr. B.P. Pandey S. Chand Publication.
6. Text book of Biotechnology by R.C. Dubey, S. Chand Publications.

Reference Books:

1. P. K. Gupta, Introduction to Biotechnology, Rastogi Publications.
2. B. D. Singh, Biotechnology: Expanding Horizons, Kalyani Publishers, New Delhi, Second Revised Edition, 2008.
3. S. S. Purohit, Biotechnology: Fundamentals and Applications, Agrobios (India), 2005, 4th Edition.

Electrical Engineering Materials					
COURSE OUTLINE					
Course Title:	Electrical Engineering Materials	Short Title:	EEM	Course Code:	
Course description:					
The objective of this course is to introduce the students to the fundamental knowledge of various materials used in electrical engineering. The course provides the essential knowledge for the selection of different conducting and insulating materials. This course includes the classification and application of electrical engineering materials. Applications of modern electrical engineering materials for nanotechnology and solar photovoltaic systems.					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	03	14	42	04	
Prerequisite course(s):					
Knowledge of H.S.C. and first year subject Introduction to Electrical & Electronics Engineering.					
Course objectives:					
The objective of the course is to provide the knowledge of different electrical engineering materials and their applications in designing electrical equipments. The course also provides the study of thermal properties for the efficient design and long life cycle of electrical equipments					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Classify different electrical engineering materials and testing of various electrical engineering materials. 2. Understand the electrical and thermal characteristics of conducting, semiconducting, insulating and magnetic materials for the manufacturing of electrical machines and electronic components. 3. Understand and plot the B-H curve of different magnetic materials, their suitability in manufacturing of energy efficient electrical machines. 4. Understand dielectric properties of insulating materials in static and alternating fields. 5. Recognize the materials used for solar photovoltaic systems and nanotechnology. 6. Do higher studies in solar photovoltaic material for green and clean power generation in view of sustainable development through environmental and safety aspects. 					
COURSE CONTENT					
Electrical Engineering Materials			Semester:	IV	
Teaching Scheme:			Examination scheme		
Lectures:	3 hours/week		End semester exam (ESE):		60 marks
			Duration of ESE:		03 hours
			Internal Sessional Exams (ISE):		40 marks

Unit-I:	No. of Lectures: 09 Hours	Marks: 12
<p>Conductors Classification: High conductivity, high resistivity materials, Fundamental requirements of high conductivity materials and high resistivity materials, Mobility of electron in metals, Factors affecting conductivity and resistivity of electrical material. Thermoelectric Effect: See back effect, Peltier effect, Thomson effect. Commonly used high conducting materials, properties, characteristics and applications of copper, aluminum, bronze, brass, High resistive materials, Constantan, platinum, nichrome, properties, characteristics, Materials used for AC and DC machines.</p>		
Unit-II:	No. of Lectures: 09 Hours	Marks: 12
<p>Semi-Conductors and Superconductors General concepts, energy bands, Types of semiconductors: intrinsic Semi-conductors, extrinsic Semi-conductors. Compound semiconductor, amorphous semiconductor. Hall effect, drift, mobility, diffusion in Semiconductors. Semi-conductors and their applications. Superconductors: Superconductivity, Properties of Superconductors, Critical field, Meissner effect, Type-I and type-II Superconductors.</p>		
Unit-III:	No. of Lectures: 08 Hours	Marks: 12
<p>Dielectrics and Insulators Properties of gaseous, liquid and solid dielectric, dielectric as a field medium, Electric conduction in gaseous, liquid and solid dielectric, Breakdown in dielectric materials, mechanical and electrical properties of dielectric materials, Effect of temperature on dielectric materials, polarization, loss angle and dielectric loss. Petroleum based insulating oils, transformer oil, capacitor oils, and properties. Classification of insulation (Solid) and application in AC and DC machines. Solid electrical insulating materials, fibrous, paper boards, yarns, cloth tapes, sleeving wood, impregnation, plastics, filling and bounding materials, fibrous, film, mica, rubber, mica based materials, ceramic materials.</p>		
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12
<p>Magnetic Materials Basic terms, Classification of magnetic material, diamagnetic, paramagnetic, ferromagnetic, anti-ferromagnetic and amorphous material. Hysteresis loop, magnetic susceptibility, coercive force, curie temperature. Magneto-striction, factors affecting permeability and hysteresis loss. Common magnetic materials, Soft and hard magnetic materials. Electric steel, sheet steel, cold rolled grain oriented silicon steel, hot rolled grain oriented silicon steel, hot rolled silicon steel sheet</p>		
Unit-V:	No. of Lectures: 08 Hours	Marks: 12
<p>Modern Engineering Materials</p>		

Materials for Electronic Components - Resistors, Capacitors, Inductors, Relays, Bipolar transistors, Field effect transistor (FET), Integrated circuits, Power devices

Nanotechnology – Introduction, Nano-devices, applications

Solar/Photovoltaic Cell- Introduction, Photo generation of charge carriers, p-n junction, Light absorbing materials: Silicon thin films, concentrating photovoltaic.

Text Books:

1. A. J. Dekker, “Electrical Engineering Materials”. PHI Pvt. Ltd.
2. C. S. Indulkar and S.Thiruvengadam, “Electrical Engineering Materials”, S Chand Publication, 1st edition.
3. S. P. Chhahotra and B. K. Bhat, “Electrical Engineering Materials”, Khanna Publication
4. Electrical Engineering Materials: T.T.T.I. Chennai, TMH, 34th edition.

Reference Books:

2. R. K. Rajput, “Electrical Engineering Materials”, Laxmi Publication, 2nd edition.

Analog and Digital Electronics					
COURSE OUTLINE					
Course Title:	Analog and Digital Electronics	Short Title:	ADE	Course Code:	
Course description:					
This course provides an introduction to solid state devices, power semiconductor devices, linear integrated circuits and voltage regulator ICs which includes over view of semiconductor devices, integrated circuits, their characteristics and applications, digital electronics, combinational circuits, sequential circuits.					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	03	14	42	03	
Prerequisite course(s):					
Basics of diodes, BJT, OPAMP, Logic Gates, Number System and Boolean algebra.					
Course objectives:					
<ol style="list-style-type: none"> 1. To introduction to BJT and diode rectifier. 2. To develop the concept of basics of operational Amplifier and its applications. 3. To understand the behavior of semiconductor devices operated as power switches. 4. This course provides an introduction to digital electronics SOP and POS form, k-map technique, flip-flops, sequential circuits such as ripple counter, synchronous counter, Mod-n counter, shift register and its applications. 					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Apply basic knowledge of science and engineering to understand electronic devices and circuits. 2. Understand the construction and working principles of different electronic devices. 3. Analyze the circuit for determination of circuit parameters and response of electronic devices. 4. Understand the use of different electronic devices such as BJT, FET, Op-amp, IC 555, and PLL. 5. Use the basic logic gates and various reduction techniques of digital logic circuit in detail. 6. Gain the basic concept of combinational and sequential circuits with the help of basic building blocks. Able to design combinational and sequential circuits using excitation and state table. 					
COURSE CONTENT					
Analog and Digital Electronics			Semester:	IV	
Teaching Scheme:			Examination scheme		

Lectures:	3 hours/week	End semester exam (ESE):	60 marks
		Duration of ESE:	03 hours
		Internal Sessional Exams (ISE):	40 marks
Unit-I:	No. of Lectures: 08 Hours	Marks: 12	
<p>Diode and BJT Applications: DC Power supplies, types, Diode rectifier: Introduction, half wave rectifier, full wave rectifier-Center tap and bridge rectifier With capacitor filter and its analysis for ripple factor and efficiency. Comparison of rectifiers.</p> <p>BJT amplifier: Single stage common emitter, common base and common collector amplifier, Multistage amplifier, direct coupled, RC coupled and transformer coupled, Darlington pair, Push-Pull amplifier, FET amplifiers and comparison.</p>			
Unit-II:	No. of Lectures: 08 Hours	Marks: 12	
<p>Operational amplifier: Op-amp parameters such as CMRR, slew rate, frequency response and gain limitations. Inverting, non inverting amplifier. Summer and subtractor. Op-amp applications: Integrator, differentiator. Op-amp as Comparator, Schmitt trigger, Instrumentation amplifier, log and antilog amplifier, precision rectifiers, Waveform generation using Op-amp – sine, square and triangular.</p>			
Unit-III:	No. of Lectures: 08 Hours	Marks: 12	
<p>Timer and Voltage Regulators: IC 555 Timer: Functional block diagram, modes of operation- Astable, Monostable, Study of VCO and PLL, Types of voltage regulators, Series and shunt voltage regulators, Protection circuits for voltage regulators, Fixed and variable voltage regulators using ICs Viz 78xx,79xx,LM723, LM317.</p>			
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12	
<p>Combinational Circuits: Standard representation of logic functions: SOP and POS forms, K-map (for 2, 3 & 4 variables): representation of logic functions, simplification of logic functions and minimization of logic functions, don't care conditions. Classification of combinational circuits-Arithmetic and logical functions : adders and subtractor (Half and Full), Comparator Data transmission: Multiplexers, Demultiplexers, Encoders, decoders, Code converters binary to gray and gray to binary, BCD - to - 7 segment decoder, look ahead carry, Arithmetic and logic unit (ALU).</p>			
Unit-V:	No. of Lectures: 08 Hours	Marks: 12	
<p>Flip-Flops and Sequential Circuits: A 1-Bit Memory Cell, Clocked S-R flip-flop, Edged triggered J-K flip-flop, Race around condition, J-K master slave flip-flop, Edged triggered D-type flip-flop, T-type flip-flop.</p> <p>Classification of sequential circuits-synchronous and asynchronous, Registers, application of shift registers, ring counter, twisted ring counter. Asynchronous and synchronous counter, 4 bit UP/DOWN ripple counter. Introduction to finite state machine (mealy and more type).</p>

Electrical Machines-II				
COURSE OUTLINE				
Course Title:	Electrical Machines-II	Short Title:	EMC-II	Course Code:
Course description:				
This course is an advanced level Electrical Machines-I which will further strengthen the knowledge of the students. The course explores on understanding of construction, basic principles underlying the operation of electrical machines, performance, characteristic and testing of AC Machines, Voltage regulation of synchronous alternator, parallel operation and salient features and characteristic of synchronous motor. It also gives the platform to understand construction, working, performance and application of three phase and single phase motors.				
Lecture	Hours/week	No. of weeks	Total hours	Semester credits
	03	14	42	03
Prerequisite course(s):				
Knowledge of Electrical Machine-I at III Semester of Engineering.				
Course objectives:				
The object of syllabus to impart the fundamental knowledge of Synchronous machines. Students will be able to develop their ability to apply the specific procedures for comprehensive treatment of rotating machines. In the earlier stage the machine worked in isolation and its simple analysis was sufficient. Now the electric machines form an integral part of large system comprising of other components as well. The object is not great depth, but enough to give theory at a level that can be understood by undergraduate. With this beginning, the students will have the foundation to continue his education and able to do better in professional duties in the field of manufacturing, testing, operation and control.				
Course outcomes:				
After successful completion of this course the student will be able to:				
<ol style="list-style-type: none"> 1. Apply basic knowledge of science and engineering to understand electrical machines. 2. Explain construction, concepts, principles of operation, testing and application of synchronous machines, induction motor and special function motors. 3. Explain the behavior of synchronous machine on infinite bus and analyze data for qualitative and quantitative parameters to determine characteristics of machines by performing practical. 4. Perform professional duties in team of manufacturing, testing, operation and maintenance with the sense of safety precautions. 5. Apply knowledge for technological subjects such as utilization of electrical energy, switch gear and machine design for economical and sustainable developments. 6. Do higher studies and able to use updated software and tools for continuous updating of knowledge. 				
COURSE CONTENT				
Electrical Machines-II		Semester:	IV	
Teaching Scheme:		Examination scheme		
Lectures:	3 hours/week	End semester exam (ESE):		60 marks

		Duration of ESE:	03 hours
		Internal Sessional Exams (ISE):	40 marks
Unit-I:	No. of Lectures: 08 Hours	Marks: 12	
Fundamentals of AC machine			
Concept and general terms pertaining to rotating machine, emf generation in AC machines. Generated emf in full pitch and short pitch winding, Physical arrangement of windings in stator and cylindrical rotor; slots for windings; single turn coil - active portion and overhang; full-pitch coils, concentrated winding, distributed winding, concentrated and distributed, Sinusoidally distributed winding, winding distribution factor.			
Unit-II:	No. of Lectures: 08 Hours	Marks: 12	
Synchronous Alternator			
Principle of generator, construction, excitation system, E.M.F. equation, Alternator on- load, effect of armature current; armature reaction; resistance drop; Concept leakage reactance, synchronous reactance and synchronous impedance. Voltage regulation of non salient pole alternator by direct load testing, synchronous impedance method and m.m.f. method.			
Two reaction theory for salient pole machines, direct axis and quadrature axis reactance, power angle relation for non salient pole machines and salient pole Parallel operation of alternator: need, conditions and method of parallel operation, Two alternators working in parallel, Effect of changing mechanical torque and excitation. Load sharing between two parallel connected alternators. Alternator on an infinite bus.			
Unit-III:	No. of Lectures: 08 Hours	Marks: 12	
Induction Machines			
Construction, Types (squirrel cage and slip-ring), Torque Slip Characteristics, Starting and Maximum Torque. Equivalent circuit. Phasor Diagram, Losses and Efficiency. Effect of parameter variation on torque speed characteristics (variation of rotor and stator resistances, stator voltage, frequency). Methods of starting, braking and speed control for induction motors. Generator operation. Self-excitation. Doubly-Fed Induction Machines.			
Unit-IV:	No. of Lectures: 08 Hours	Marks: 12	
Synchronous Motor			
Motor action, phasor diagram on the basis of synchronous impedance, expression for gross mechanical power developed; power flow. Operation with constant load and variable excitation : locus of tip of current phasor under the above condition and v curve			
Operation with const. excitation and variable load: locus of tip of current phasor circle phasor. Starting method, hunting and it causes and remedies			
Unit-V:	No. of Lectures: 08 Hours	Marks: 12	
Pulsating and revolving magnetic fields			
Pulsating magnetic field - alternating current in windings with spatial displacement, Magnetic field produced by a single winding, Windings spatially shifted by 90 degrees, torque of pulsating magnetic fields, revolving magnetic field.			
Single-phase induction motors			

Constructional features, principle of operation for single phase induction motor, capacitor start motor, split phase motor and shaded pole motor induction motor, development of torque, torque slip characteristic, starting characteristic. Construction, working operation, characteristic of repulsion and universal motor.

Entrepreneurship Development					
COURSE OUTLINE					
Course Title:	Entrepreneurship Development	Short Title:	ED	Course Code:	
Course description:					
Last few decades have seen the advent of various new disciplines in the area of management. One such discipline, Entrepreneurship has emerged quite recently. The syllabus explore the concept of entrepreneurship, financial requirements of a new enterprise, Expansion strategies of an enterprise, challenges for small enterprises and Institutional Support for small enterprises					
Lecture	Hours/week	No. of weeks	Total hours	Semester credits	
	03	14	42	3	
Prerequisite course(s):					
Knowledge of subject Industrial Organization And Management.					
Course objectives:					
The economic objectives of country, such as industrial development, regional growth, employment generation and development of small scale industries entirely depend on the growth of entrepreneurship. As concept, Entrepreneurship poses a challenge for entrepreneurs to select and implement business strategies to tread the glorious path of success and growth. Successful entrepreneurship requires passion of an entrepreneur and thus, it is more than the money and luck. In the contemporary world, the study of this discipline become of umpteen importance to understand the complexities of business environment at national and international levels.					
Course outcomes:					
After successful completion of this course the student will be able to:					
<ol style="list-style-type: none"> 1. Understand the various new disciplines in the area of management. 2. Understand concept of entrepreneurship and learn the procedure of setting up an enterprise. 3. Understand the concepts of human resource management, marketing management, financial management, production and operation management in a new enterprise. 4. Function on multidisciplinary teams and understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. Estimate the financial feasibility of business and identify the various sources of financing. 6. Understand the role of small scale enterprises in economic development of a country and understand the linkage between small and large scale enterprises. 7. Develop skills to become entrepreneurs in view of economic objectives of country, such as industrial development, regional growth, employment generation and development of small scale industries through technological developments. 					

COURSE CONTENT			
Entrepreneurship Development		Semester:	IV
Teaching Scheme:		Examination scheme	
Lectures:	3 hours/week	End semester exam (ESE):	60 marks
		Duration of ESE:	03 hours
		Internal Sessional Exams (ISE):	40 marks
Unit–I:	No. of Lectures: 08 Hours	Marks: 12	
Introduction to Entrepreneurship			
Introduction, Concept of entrepreneurship: Significance of entrepreneurship, Theories of entrepreneurship, Models of entrepreneurship development Definition of entrepreneur: Traits and characteristics of successful entrepreneur , Functions of an entrepreneur , Types of entrepreneurs, Factors influencing entrepreneur, Professional vs. family entrepreneurs, Entrepreneurial leaders vs. managers, Entrepreneurial process: Entrepreneurial motivation, Entrepreneurial barriers, Women as entrepreneur , Role of woman entrepreneurs in society, Barriers to women entrepreneurs , Myths of entrepreneurship, Problems faced by entrepreneurs and capacity building for entrepreneurship, Profiles of successful entrepreneurs.			
Unit–II:	No. of Lectures: 08 Hours	Marks: 12	
Financial requirements of a new Enterprise			
Estimating financial requirements, Estimation of fix capital requirements, Estimation of working capital requirements Identifying the sources of finance –sources of long-term financing: Sources of medium term financing , Sources of short-term financing Institutions providing financial assistance: Venture capital funding- venture capital funding in the Indian scenario, Venture capital funding process, Importance of financial management, Working capital management, Accounting and book keeping, Financial statement, Financial ration analysis			
Unit–III:	No. of Lectures: 08 Hours	Marks: 12	
Expansion strategies of an Enterprise			
Expanding and enterprise: Expansion through concentration, Expansion through integration, Expansion through diversification , Expansion through cooperation, Expansion through internationalization, Expansion through digitalization , Organization life cycle, Strategic management, The essence of business ethics			
Unit–IV:	No. of Lectures: 08 Hours	Marks: 12	
Challenges for small Enterprises			
Problem faced by small enterprises: Managerial problems, Marketing management, Human resource, Production management, Technological problems			

Role of central and state governments in promoting small enterprises: Fiscal and tax concessions for small enterprises, Industrial policies for small enterprises, Importance of marketing, Customer relationship management (CRM), Marketing services		
Unit–V:	No. of Lectures: 08 Hours	Marks: 12
Institutional Support for small enterprises and decision support system		
Institutions supporting small scale enterprises: Small scale industries (SSI) board, Khadi and village industries commission (KVIC), Micro, small and medium enterprises development organization (MSME-DO), National small industries corporation limited (NSIC), National institute for entrepreneurship and small business development (NIESBUD)‘ Indian institute of entrepreneurship (IIE), State industrial development / Investment Corporation (SIDCs/SIICs), State directorate of Industries (SDIs), District industry centers (DICs) ,Industry associations , Non-Governmental organization		
Institutions providing financial association: Small industries development bank of India (SIDBI), State financial corporation (SFCs) Technological up gradation and moderation of small enterprises: ISO 9000/14001 certification fee reimbursement scheme,

Electrical Engineering Materials Laboratory					
LAB COURSE OUTLINE					
Course Title:	Electrical Engineering Materials Laboratory	Short Title:	EEM Lab.	Course Code:	
Course description:					
The objective of this course is to introduce the students to the fundamental knowledge of various materials used in electrical engineering. Testing of electrical engineering material and application. Testing of insulation oil as per IS.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	02	14	28	01	
End Semester Exam (ESE) Pattern:					
Prerequisite course(s):					
Knowledge of HSC and First year Engineering.					
Course objectives:					
The objective of the course is to provide students with the essential knowledge of different electrical engineering materials and their applications in designing electrical equipments. The students will able to carry different test on electrical engineering materials to find characteristic and applications. The students will able to select the material for different applications. This course also provides a platform for further studies in solar electric power generation.					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Apply basic knowledge of science and understand the characteristic of conducting material and their applications. 2. Analyze the practical data for determination of properties of materials. 3. Understand break down mechanisms for insulating materials. 4. Do testing of transformer oil as per IS. 5. Recognize the materials used for solar photovoltaic systems and nanotechnology. 6. Do higher studies in solar photovoltaic material for green, clean power generation in view of development through environmental aspects. 					
LAB COURSE CONTENT					
Electrical Engineering Materials Lab			Semester:	IV	
Teaching Scheme:			Examination scheme		
Practical:	2 hours/week				
Teacher should facilitate learning following lab experiments:					
<ol style="list-style-type: none"> 1. Testing of insulating oil as per IS 2. Testing of solid insulating materials as per IS 					

3. Testing of power capacitors as per IS
4. Measurements of resistivity of conducting materials.
5. Measurements of resistivity of resistive material.
6. Study and use of Gauss meter.
7. Use of spark gap for high voltage testings for air.
8. To study See back and Peltier effects.
9. Study of hysteresis loop of ferromagnetic materials.
10. Study of various insulating materials.

Note: Lab file should consist of minimum **Eight** experiments.

Evaluation of student performance throughout semester and practical assignment submitted by the student in the form of journal.

Text Books:

1. A. J. Dekker, "Electrical Engineering Materials". PHI pvt. ltd.
2. C. S. Indulkar and S.Thiruvengadam, "Electrical Engineering Materials", S Chand Publication, 1st edition.
3. S. P. Chhahotra and B.K.Bhat, "Electrical Engineering Materials", Khanna Publication.
4. Electrical Engineering Materials: T.T.T.I. Chennai, TMH, 34th edition.

Reference Books:

1. S. P. Seth and P. V. Gupta, "A course in Electrical Engineering Materials", Dhanpat Rai Publication, 3rd edition.
2. R. K. Rajput, "Electrical Engineering Materials", Laxmi Publication, 2nd edition.

Analog and Digital Electronics Laboratory					
LAB COURSE OUTLINE					
Course Title:	Analog and Digital Electronics Laboratory	Short Title:	ADE Lab.	Course Code:	
Course description:					
This course provides an introduction to solid state devices, power semiconductor devices, linear integrated circuits and voltage regulator ICs which includes over view of semiconductor devices, integrated circuits, their characteristics and applications, digital electronics, combinational circuits, sequential circuits.					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	02	14	28	01	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Basics of diodes, BJT, OP-AMP, Logic Gates, Number System and Boolean Algebra.					
Course objectives:					
<ol style="list-style-type: none"> 1. To introduction to BJT and diode rectifier. 2. To develop the concept of basics of operational Amplifier and its applications. 3. To understand the behavior of semiconductor devices operated as power switches. 4. This course provides an introduction to digital electronics SOP and POS form, k-map technique, flip-flops, sequential circuits such as ripple counter, synchronous counter, Mod-n counter, shift register and its applications. 					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Apply basic knowledge of science and engineering to understand electronic devices and circuits. 2. Understand the construction and working principles of different electronic devices. 3. Analyze the circuit for determination of circuit parameters and response of electronic devices. 4. Understand the use of different electronic devices such as BJT, FET, Op-amp, IC 555, and PLL. 5. Use the basic logic gates and various reduction techniques of digital logic circuit in detail. 6. Gain the basic concept of combinational and sequential circuits with the help of basic building blocks. Able to design combinational and sequential circuits using excitation and state table. 					
LAB COURSE CONTENT					
Analog and Digital Electronics Laboratory			Semester:	IV	

Teaching Scheme:		Examination scheme	
Practical:	2 hours/week	End semester exam (ESE):	25 marks
		Internal Continuous Assessment (ICA):	25 marks
<p>Teacher should facilitate learning following lab experiments:</p> <ol style="list-style-type: none"> 1. Observe the input and output voltage of half wave rectifier. 2. Observe the input and output voltage of full wave -Center tap rectifier. 3. Observe the input and output voltage of full wave bridge rectifier. 4. Op-amp as square wave generator using IC 741. 5. Op-amp as sine wave generator using IC 741. 6. Op-amp as comparator using IC 741 7. Op-amp as Schmitt trigger using IC 741. 8. IC 555 applications – Astable & Monostable Multivibrator. 9. Low voltage regulator using IC 723. 10. High voltage regulator using IC 723. 11. IC 78XX used as Positive voltage regulator. 12. IC 79XX used as Negative voltage regulator. 13. Design and verify operation of half adder and full adder. 14. Design and verify operation of half subtractor. 15. Design and construct basic flip-flops. 16. Design and verify the 4-bit synchronous counter. 17. Design and verify the 4-bit asynchronous counter. <p>Note: Lab file should consist of minimum Eight experiments.</p>

Guide lines for ICA:
ICA shall be based on continuous evaluation of student performance throughout semester and practical assignment submitted by the student in the form of journal.
Guidelines for ESE:
In ESE the student may be asked to perform any one practical. Evaluation will be based on paper work, performance and oral in the practical examination.

Electrical Machines-II Laboratory					
LAB COURSE OUTLINE					
Course Title:	Electrical Machines-II Laboratory	Short Title:	EMC-II Lab.	Course Code:	
Course description:					
In this laboratory course emphasis on imparting the practical knowledge and understanding of basic principles, determination of characteristic , performance and testing of AC Machines, Voltage regulation of synchronous alternator. Application of single phase motors					
Laboratory	Hours/week	No. of weeks	Total hours	Semester credits	
	02	14	28	01	
End Semester Exam (ESE) Pattern:			Practical (PR)		
Prerequisite course(s):					
Knowledge of Electrical Machine-I.					
Course objectives:					
The objective of the laboratory is to impart the fundamental knowledge of Synchronous machine and AC motors. Students will able to develop their ability to apply the specific procedures for analyze the experimental results. The students will able to understand the characteristic of Synchronous alternator and motor, application in process and manufacturing. Application of different methods to find voltage regulation of synchronous alternator. In this lab course, students will be familiar with the use of different equipments, safety precautions on work place. This makes bridge on theoretical knowledge and practical practices.					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
After successful completion of this lab course students will be able to:					
<ol style="list-style-type: none"> 1. Apply basic knowledge of science and engineering to understand electrical machine. 2. Select suitable motors with technical specification for required application and adopt safety precautions. 3. Analyze data for qualitative and quantitative parameters to determine characteristics of machines by performing practical 4. Apply knowledge for technological subjects such as utilization of electrical energy, switch gear & protection, manufacturing processes and safety precautions. 5. Discharging duties in technical field for economical, societal and sustainable developments. 6. Do higher studies and able to use updated software and tools for continuous updating of knowledge. 					
LAB COURSE CONTENT					
Electrical Machines-II Laboratory		Semester:		IV	
Teaching Scheme:		Examination scheme			
Practical:	2 hours/week	End semester exam (ESE):		25 marks	
		Internal Continuous Assessment (ICA):		25 marks	
Teacher should facilitate learning following lab experiments:					

1. Determination of voltage regulation and efficiency of three phase alternator by direct load test.
2. Open and short circuit test on three phase alternator: determination of its regulation by e.m.f. method and m.m.f. method.
3. Zero power factor test on three phase alternator: determination of regulation by Potier triangle method.
4. Determination of direct axis and quadrature axis reactance by slip test on synchronous machine. Determination of voltage regulation by two reactance theory.
5. Synchronizing alternators: lamp methods and use of synchroscope.
6. Synchronous alternator on infinite bus: behavior of machine under change in mechanical power and excitation.
7. Characteristic of synchronous motor at constant load and variable excitation.
8. Characteristic of synchronous motor at constant excitation and variable load.
9. Determination of performance of three phase induction motor by direct load test.
10. Determination of performance of three phase induction motor by no load, blocked rotor test and construction of circle diagram.
11. No load and blocked rotor tests on capacitor start single phase induction motor and determination of parameters of equivalent circuit.
12. Load test on single phase induction motor.

Note: Lab file should consist of minimum **Eight** experiments.

Text Books:

Guide lines for ICA:

ICA shall be based on continuous evaluation of student performance throughout semester and practical assignment submitted by the student in the form of journal.

Guidelines for ESE:

ESE will be based on practical assignment submitted by the student in the form of journal. In ESE the student may be asked to perform any one practical. Evaluation will be based on paper work and performance in the practical.

Measurement and Instrumentation Laboratory					
LAB COURSE OUTLINE					
Course Title:	Measurement and Instrumentation Lab.	Short Title:	MI Lab	Course Code:	
Course description:					
In this laboratory, course emphasis on imparting the practical knowledge and understanding of basic principles, characteristic, performance of different measuring instruments and measurement of different electrical quantities. It also gives the platform to understand need and importance of calibration and standardization.					
	Hours/week	No. of weeks	Total hours	Semester credits	
Lecture	01	14	14	02	
Laboratory	02	14	28		
End Semester Exam (ESE) Pattern:			Oral (OR)		
Prerequisite course(s):					
Knowledge of HSC, First year Engineering/Diploma.					
Course objectives:					
The objective of the laboratory is to impart the fundamental knowledge of measuring instruments. Students develop their ability to select the specific instrument in reference of ranges and resolution of instruments for proper and correct analysis. The students will be able to understand the characteristic of measuring instruments. In this lab course, students will be familiar with the use of different equipments, safety precautions on work place. This makes bridge on theoretical knowledge and practical practices					
Course outcomes:					
Upon successful completion of lab Course, student will be able to:					
<ol style="list-style-type: none"> 1. Conduct practical and able to analyze the practical data for various purposes. 2. Measure various electrical quantities and circuit parameters 3. Able to select the measuring instrument with proper range and type for practical uses. 4. Calibrate various types of instruments as per IS. 5. Do professional duties in technical field and able to use advance measuring instruments. 6. Do professional duties in technical field for economical development. 					
LAB COURSE CONTENT					
Measurement and Instrumentation Laboratory		Semester:		IV	
Teaching Scheme:		Examination scheme			
Lectures:	1 hour/week	End semester exam (ESE):		25 marks	
Practical:	2 hours/week	Internal Continuous Assessment (ICA):		25 marks	

Theory:**Unit-I: Introduction to Measurement and instrumentation**

Definition, purpose, measurement – definitions, types and Classification of instruments, Generalized measurement system, standards, and calibrations, Errors – types – gross, systematic, random, limiting, sources of errors, techniques to minimize them. Instrument transformers-theory, Expression for ratio and phase angle errors.

Unit-II: D.C. and A .C. Bridges

DC Bridges: Wheatstone bridge, Kelvin’s double bridge, Megger, D.C. potentiometer. AC Bridges: Classification, Maxwell, Anderson, Schering, and Wein Bridge. Introduction to PMMC and MI.

Unit-III: Measurement of Power: Construction and principle of operation of electrodynamic wattmeter, low P. F. wattmeters, Active & reactive power measurement in three phase system for balanced and unbalanced load using three wattmeter method, two wattmeter method & one wattmeter method.

Unit-IV: Measurement of Energy: Construction and principle of operation, Torque equation for the induction type of energy-meter, Calibration of Energy meters, and three phase energy meter. Electronic Energy meters- construction and principle.

Unit-V: Introduction to transducers:

Transducers: Definition, classification, selection of transducer. Measurement of temperature: Using R T D, thermocouple. Pressure Measurement: Bourdon Tubes, bellows, diaphragms. Displacement measurement: LVDT, strain gauge -types, working principles

Teacher should facilitate learning following lab experiments:

1. Measurement of active power and reactive power in three phase circuit by two wattmeter method and one wattmeter method.
2. Calibration of single phase energy meter at different P.F.’s
3. Calibration of three phase two elements energy meter at different P.F.’s
4. Kelvin’s double bridge: Measurement of low resistance
5. Strain Measurement using strain gauge.
6. Measurement of temperature by RTD/Thermocouple.
7. Measurement of pressure by using pressure transducer.
8. Measurement of displacement by using LVDT.
9. Measurement of inductance and capacitance by Andersons Bridge and Schering bridge.
10. Measurement of earth resistance.
11. Measurements of phase angle error and ratio error of current Transformer
12. Measurements of phase angle error and ratio error of Potential Transformer
13. Study of DSO.

Note: Lab file should consist of minimum **Eight** experiments.

Guide lines for ICA:
ICA shall be based on continuous evaluation of student performance throughout semester and practical assignment submitted by the student in the form of journal.
Guidelines for ESE:
In ESE the student may be asked to perform any one practical. Evaluation will be based on paper work, performance and oral in the practical examination.

Environmental Studies					
COURSE OUTLINE					
Course Title:	Environmental Studies	Short Title:	EVS	Course Code:	Non Credit
Course description:					
The course aims to percolate the importance of environmental science and environmental studies.					
COURSE CONTENT					
Environmental Studies		Semester:		IV	
		Examination scheme			
		End Semester Exam (ESE):			80 marks
		Duration of ESE:			03 hours
		Internal Continuous Assessment (ICA):			20 marks
Unit-I:		No. of Lectures: 02 Hours			
Multidisciplinary nature of environmental studies					
Definition, scope and importance, Need for public awareness.					
Unit-II:		No. of Lectures: 08 Hours			
Natural Resources :					
Renewable and non-renewable resources					
Natural resources and associated problems.					
<ul style="list-style-type: none"> a. Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. b. Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. c. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. d. Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. e. Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies. f. Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. 					
• Role of an individual in conservation of natural resources.					
• Equitable use of resources for sustainable lifestyles.					
Unit-III:		No. of Lectures: 06 Hours			

Ecosystems

- Concept of an ecosystem.
- Structure and function of an ecosystem.
- Producers, consumers and decomposers.
- Energy flow in the ecosystem.
- Ecological succession.
- Food chains, food webs and ecological pyramids.
- Introduction, types, characteristic features, structure and function of the following ecosystem :-
 - a. Forest ecosystem
 - b. Grassland ecosystem
 - c. Desert ecosystem
 - d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit–IV:

No. of Lectures: 08 Hours

Biodiversity and its conservation

- Introduction – Definition: genetic, species and ecosystem diversity.
- Biogeographic classification of India
- Value of biodiversity : consumptive use, productive use, social, ethical, aesthetic and option values
- Biodiversity at global, National and local levels.
- India as a mega-diversity nation
- Hot-spots of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India
- Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Unit–V:

No. of Lectures: 08 Hours

Environmental Pollution

Definition, Cause, effects and control measures of :-

- a. Air pollution
 - b. Water pollution
 - c. Soil pollution
 - d. Marine pollution
 - e. Noise pollution
 - f. Thermal pollution
 - g. Nuclear hazards
- Solid waste Management: Causes, effects and control measures of urban and industrial wastes.

<ul style="list-style-type: none"> · Role of an individual in prevention of pollution. · Pollution case studies. · Disaster management: floods, earthquake, cyclone and landslides. 		
Unit–VI:		
No. of Lectures: 07 Hours		
Social Issues and the Environment		
<ul style="list-style-type: none"> · From Unsustainable to Sustainable development · Urban problems related to energy · Water conservation, rain water harvesting, watershed management · Resettlement and rehabilitation of people; its problems and concerns. CaseStudies · Environmental ethics: Issues and possible solutions. · Climate change, global warming, acid rain, ozone layer depletion, nuclear · Accidents and holocaust. Case Studies. · Wasteland reclamation. · Consumerism and waste products. · Environment Protection Act. · Air (Prevention and Control of Pollution) Act. · Water (Prevention and control of Pollution) Act · Wildlife Protection Act · Forest Conservation Act · Issues involved in enforcement of environmental legislation. · Public awareness. 		
Unit–VII:		
No. of Lectures: 06 Hours		
Human Population and the Environment		
<ul style="list-style-type: none"> · Population growth, variation among nations. · Population explosion – Family Welfare Program · Environment and human health. · Human Rights. · Value Education. · HIV/AIDS. · Women and Child Welfare. · Role of Information Technology in Environment and human health. · Case Studies. 		
Unit–VIII:		
No. of Lectures:		
Field work		
<ul style="list-style-type: none"> · Visit to a local area to document environmental assets, 		

<p>river/forest/grassland/hill/mountain</p> <ul style="list-style-type: none"> · Visit to a local polluted site-Urban/Rural/Industrial/Agricultural · Study of common plants, insects, birds. · Study of simple ecosystems-pond, river, hill slopes, etc. (Field work Equal to 5lecture hours)
<p>Guide lines for ICA:</p>
<p>Students must submit ICA in the form of journal. Each assignment should be well documented. Faculty in charge will assess the assignments continuously and grade or mark each assignment on completion date declared for each assignments.</p>
